INTRODUCTION

Moomba inboard ski and wakeboard boats are manufactured by Skier’s Choice, Inc. in Maryville, Tennessee and distributed throughout the United States and the world.

This manual provides an overview for operating your Moomba boat. It should be considered a permanent part of your Moomba boat and contains important information on Safety, Boating Rules, Proper Operation and Maintenance of your boat. Should the boat be sold, this manual will provide the same important information to the next owner.

Be sure to read and understand all aspects of Boating Safety and Operation before using your boat. If you have any questions, your dealer can provide the information you need to have a safe and pleasurable boating experience.

All information, illustrations and specifications in this manual are based on the latest product information available at the time of printing. Moomba may discontinue models and equipment or change specifications and designs without any notice and without incurring obligation.

This manual contains information about several Moomba models. Some information may not apply to your boat since standards and optional equipment may vary from model to model.

As you read through this manual, you will find CAUTION, WARNING and DANGER symbols which require special attention. Please read them carefully! They may tell you how to avoid problems and/or endangering yourself, your passengers, and other boaters.

PLEASE REVIEW ALL SAFETY INFORMATION.

A maintenance schedule and accessory information are included to assure trouble-free operation of your boat. Should service problems arise, remember that your Moomba dealer knows your boat best and is interested in your total satisfaction.

Thank you for purchasing a Moomba boat. We hope your ownership results in an enjoyable and rewarding boating experience.

Be safe and enjoy the fun!
DAILY CHECKLIST

☐ Drain Plugs (Securely in place?)
☐ Life-Saving Devices (One for every person on board?)
☐ Steering System (Working smoothly and properly?)
☐ Fuel System (Adequate fuel? Leaks? Fumes?)
☐ Battery (Fully charged? Cable terminals clean and tight?)
☐ Engine (in neutral?)
☐ Capacity Plate (Are you overloaded or overpowered?)
☐ Weather Conditions (Is it safe to go out?)
☐ Electrical Equipment (Lights, horn, pump, etc.?)
☐ Emergency Gear (Fire extinguisher, bailer, paddle, anchor & line, signaling device, tool kit, etc.?)
☐ Bilge Pump (Working properly?)

NOTE: Bilge pump should be checked prior to each use to ensure proper operation.

Check BEFORE running your boat (where applicable).

☐ Engine Oil Level
☐ Transmission Lubricant Level
☐ Engine Drain Plug, Transom Drain Plug and Center Drain Plug
☐ Leakage (Fuel, water lines and connections)

CAUTION

DO NOT operate engine without cooling water flowing through water pump, or pump will sustain damage and subsequent engine damage may result!

Check BEFORE running your boat.

☐ Oil Pressure: Refer to Engine Owner’s Manual.
☐ Water Temperature: 160 - 180 degrees for raw water systems (water is not recirculated), and 180 - 200 degrees for closed cooling systems (water is recirculated).
☐ Idle RPM: (650 - 750) in gear.
☐ Maximum Forward RPM: Refer to Engine Owner’s Manual.
☐ Shifting Linkage (Forward, Neutral & Reverse).

WARNING

GASOLINE VAPORS CAN EXPLODE. It is very important to check for fuel spillage or leaks prior to each use of your boat.

☐ Check engine compartment for gasoline vapors.
☐ Operate blower for four minutes before starting the engine.
☐ Always operate blower below cruising speed.

NOTE: Please refer to your Engine Owner’s Manual for maximum RPM and engine break-in procedure.
IMPORTANT SAFETY INFORMATION

Your safety, as well as the safety of others with and around you, is a direct result of how you operate and maintain your boat. Read and comprehend this manual. Make sure that you understand all the controls and operating instructions before attempting to operate the boat. Improper operation is extremely dangerous.

The basic safety rules are outlined in this section of the manual. Additional precautions throughout the manual are noted by the following symbols:

⚠️ CAUTION

This symbol indicates a potentially hazardous circumstance, which, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.

⚠️ WARNING

This symbol indicates a potentially hazardous situation, which, if not avoided, could result in death or serious injury.

⚠️ DANGER

This symbol indicates an imminently hazardous situation, which, if not avoided, will result in death or serious injury. This is limited to the most extreme situations.

The precautions listed in this manual and on the boat are not exhaustive. If a procedure, method, tool or part is not specifically recommended by Skier’s Choice, you must satisfy yourself that it is safe for you and others, and that the boat will not be damaged or made unsafe as a result of your decision.

REMEMBER: ALWAYS USE COMMON SENSE WHEN OPERATING, SERVICING OR REPAIRING THE BOAT!

In addition to everyday safety, failure to observe safety recommendations may result in severe personal injury or death to you or to others. Use caution and common sense when operating your boat. Don’t take unnecessary chances!

Be certain that all boat passengers are aware of this information and conform to boat safety principles.

SAFE BOATING

Safe boating practices may seem obvious, but people have thought up risky and dangerous activities in boats, with boats, and behind boats. Just because you or your passengers have seen a boating maneuver performed or have seen a particular activity promoted, do not assume there is no risk of injury or death. Before you or your passengers go out in the boat and engage in any water sport activity, give careful consideration to the risks. Plan ahead. Think twice before you try something new behind your boat or with your boat. Know the limits of you, your passengers and your equipment and do not exceed them.

In addition to careful review of this manual, you should be aware as well that there are many sources of information available. Skier’s Choice urges you to pursue additional training, such as safety and seamanship courses offered by the U.S. Coast Guard Auxiliary and the U.S. Power Squadron.

Safe boating and safe actions may seem obvious, yet every year US Coast Guard statistics give evidence that many people disregard safe boating practices. Do not take safety for granted. Think twice. We want all our boat owners and their passengers, friends, and families to have a safe and enjoyable experience on the water.

US COAST GUARD AUXILIARY BOATING SAFETY COURSE

The purchaser of a new 2015 Moomba boat is entitled to a USCGA Boating Safety Course that Moomba will pay for. Please see the Certificate in your owner’s packet or your dealer for more details.

WATER SPORTS NAMES AND TERMINOLOGY

There are many types of towed water sports, and they are known by many different names. The more popular sports are wakeboarding, waterskiing, surfing, wakeboarding and tubing. And there are many others. The terms used to describe participants in towed water sports activities also vary greatly. Typical terms include rider, skier, and wakeboarder. To keep the language in this manual straightforward, we use rider or skier to refer to a participant in any towed water sport. The terms ski, skiing, riding or wakeboarding are used to refer to any towed water sport.
SAFETY TRAINING ORGANIZATIONS

The following is a listing of just some of the agencies and organizations that offer safety training or information:

**American Red Cross, National HQ**
2025 E Street NW, Washington, DC 20006
(202) 303-4498  [www.redcross.org](http://www.redcross.org)

**USA Waterski**
1251 Holy Cow Rd., Polk City, FL 33868
(863) 324-4341  [www.usawaterski.org](http://www.usawaterski.org)

**Boat Owners Association of the United States (BOAT/US)**
880 South Pickett Street, Alexandria, VA 22304
(703) 461-4666  [www.boatus.com](http://www.boatus.com)

**National Safe Boating Council**
P.O. Box 509, Bristow, VA 20136
(703) 361-4294  [www.safeboatingcouncil.org](http://www.safeboatingcouncil.org)

**U.S. Coast Guard Auxiliary Public Relations Center**
9449 Watson Industrial Park, St. Louis, MO 63126
(877) 875-6296  [www.cgaux.org](http://www.cgaux.org)

**U.S. Power Squadron**
P.O. Box 30423, Raleigh, NC 27622
(888) 367-8777  [www.usps.org](http://www.usps.org)

**On-Line Basic Boating Safety Course**
[www.boatsafe.com](http://www.boatsafe.com)

**National Marine Manufacturers Association**
231 S. LaSalle Street, Suite 2050, Chicago, IL 60604
(312) 946-6200  [www.nmma.org](http://www.nmma.org)

Federal law requires certain safety equipment to be on board at all times. In addition, responsible boaters carry other equipment in case of emergency. Check with the local boating authorities for any additional requirements over and above the federal stipulations.

SAFETY EQUIPMENT

Your Moomba has been equipped at the factory with most of the federally required safety equipment for inland waters (Class 1, 16’-to-26’).

**This equipment includes:**
- UL-approved Marine Fire Extinguisher, Type A-BC (2 lbs.), good for solids, liquids, and electrical fire
- ABYC-approved Marine Mufflers with water injection
- USCG-approved Marine Flame Arrestor
- USCG-approved Engine Box Ventilation with sparkless power blower
- ABYC-approved Electric Horn sound warning device
- USCG-approved inland lighting

Federal law also requires at least one Type I, II or III Personal Flotation Device (PFD) for each person on board or being towed on water skis or other recreational equipment. In addition, one throwable Type IV PFD must also be on board. **As the owner, obtaining the appropriate PFDs is your responsibility.** Your Moomba dealer can and will be happy to assist you.

**NOTE: Requirements for coastal waters and inland waters differ. Check with the local authorities for more information.**

A smart owner will avoid potential problems on an outing by having additional equipment on board. Normally, this equipment is dependent on the body of water and the length of the trip.

We suggest the following—as a minimum. Your Moomba dealer can also assist you with additional recommendations:
- An anchor with at least 75 feet of line
- A manual bailing device for removing water
- A combination oar/boat hook
- A day-and-night visual distress signal
- A first aid kit and manual
- An airway breathing tube
- A waterproof flashlight
- A set of local navigation charts
- Mooring lines and fenders
- Extra engine oil
- A tool kit
- A portable AM/FM radio or weather radio
- VHF handheld marine radio

Boating-related accidents are generally caused by the operator’s failure to follow basic safety rules or written precautions. Most accidents can be avoided if the operator is completely familiar with the boat, its operation, and can recognize potentially hazardous situations before an accident occurs.
GENERAL SAFETY PRECAUTIONS

Failure to adhere to these precautions may result in severe injury or death to you and/or others.

⚠️ WARNING ⚠️
- Improper operation is extremely dangerous. Operators must read and understand all operating manuals supplied with the boat before operation.
- Remain seated at all times while boat is in motion.
- Never stand or allow passengers to stand while the boat is moving. You or others may be thrown from the boat.
- Children in the bow of the boat should be accompanied by an adult at all times.
- Never operate the boat while under the influence of alcohol or drugs.
- On-board equipment must always conform to the governing federal, state, and local regulations.
- Gasoline vapors can explode. Before starting engine, open engine box, check engine compartment for gasoline vapors, and operate blower for at least four minutes.
- Run blower below cruising speed.
- Leaking fuel is a fire and explosion hazard. Inspect system regularly. Examine fuel tanks for leaks or corrosion at least annually.
- Never override or modify the engine safety shut-off switch or engine neutral starting safety switch in any way.
- Never remove or alter components of the fuel system in any way except for maintenance by qualified personnel. Tampering with fuel components may cause a hazardous condition.
- Never allow any type of spark or open flame on board. It may result in fire or explosion.
- It is the owner’s responsibility to check tightness of the tower bolts BEFORE each use.
- The tower is designed to pull a single (1) individual. DO NOT climb or sit on the tower rope may loop on inverted tricks. DO NOT sit behind the pulling point of the Tower.
- Comply with the capacity limits stated on the capacity warning label in the boat.

⚠️ CAUTION ⚠️
- The tow bar is not designed for vertical extensions. Any modifications to the tow bar or its mountings may result in damage to the boat and injury to the user.
- The tower may strike low objects. Check clearance height around docks, shore, overhanging objects, bridges and power lines.
- Do not pull past 45 degrees of the centerline of the boat. Failure to follow this rule could result in the boat capsizing.

⚠️ WARNING ⚠️
- It is the driver’s responsibility to ensure all passengers are seated when boat is underway.

⚠️ CAUTION ⚠️
Failure to adhere to these warnings may result in severe injury or death to you and/or others.
- This boat is a high-performance boat and capable of quick and tight turns and changes in direction. It is the driver’s responsibility to operate the boat in a manner to ensure the safety of all passengers.

⚠️ WARNING ⚠️
Boaters must continuously be aware of weather conditions.
- Sudden storms, wind, lightning, etc., can unexpectedly put boaters in grave danger. Always check the local weather report before going boating.

⚠️ WARNING ⚠️
It is the driver’s responsibility to determine if weather or other factors have created an unsafe boating environment.
- The driver is solely responsible for the consequences of their actions.

⚠️ DANGER ⚠️
- To avoid serious personal injury, DO NOT be on or about the swim platform while engine is running and keep away from rear of boat while engine is running.
- To avoid serious personal injury, DO NOT operate engine while anyone is on or about the swim platform or in the water near the boat.
WATER SPORTS SAFETY

Riders are obligated to be as aware of the fundamental safety rules as well as the boat operator. If you are new to towed water sports, seek certified training before starting. You will find it especially helpful to join a local ski club and USA Waterski when possible.

Always remember that the majority of water sports injuries are the result of impacts with other objects, so always look where you are going and be aware of what is going on around you.

![WARNING]

Failure to adhere to these warnings may result in severe injury or death to you and/or others.

- Every skier or rider must always wear a USCG-approved personal flotation device.
- Maintain a distance of at least 100 feet from all other objects, including other boats, piers, rafts, mooring and navigational buoys, pilings, abutments, or any other items.
- Always have an experienced driver and observer in the boat when skiing.
- Never ski in shallow water, close to shore, or in water where you do not know the depth or what is beneath the surface.
- Never put your arm, head, or any other part of your body through the handle-bridge of the ski line nor wrap the line around any part of the body at any time.
- Never ski at night, or directly in front of other boats.
- Never jump from a boat that is moving at any speed, nor enter or exit the water when the engine is running (ON).
- Make sure that everyone knows and uses approved skiing hand signals and common skiing courtesy.

SKI PYLON EXTENSIONS

The use of a ski pylon extension or extensions in excess of 7-feet vertical is not recommended by Moomba on our products. If you elect to use merchandise such as these, be aware that they could create excessive stress on your boat and subjectively cause damages not covered by the warranty.

CARBON MONOXIDE (CO) SAFETY

![WARNING]

Carbon monoxide is a colorless, odorless and tasteless gas. It is produced by gasoline engines and is a component of exhaust fumes.

Shut off the engine when people are on the swim platform or in the water around the rear of the boat.

Do not do any activities which put people in close proximity of the transom when the engine is running.

For the most current information on carbon monoxide, you may call, write or visit on-line any of the following:

United States Coast Guard
Office of Boating Safety (CG-5422)
2100 Second Street SW STOP 7581,
Washington, DC 20593-7581
1-800-368-5647  www.uscgboating.org

NMMA
National Marine Manufacturers Association
231 S. LaSalle St., Suite 2050, Chicago, IL 60604
312-946-6200  www.nmma.org

American Boat & Yacht Council, Inc.
613 Third St., Suite 10, Anapolis, MD 21403
410-956-4460  www.abycinc.org

PRODUCT MISUSE

Misuse of the product or use of it in a manner for which it was never intended can create dangerous situations. The driver and passengers are responsible for using the product safely and as intended. The driver must operate the boat in a manner that ensures the safety of all passengers. If you or your passengers are unsure about use of the product, about performing certain boating maneuvers or are unsure about a particular water activity, refer to this manual or contact a knowledgeable source such as your local dealer, Skier’s Choice, Inc., the US Coast Guard, or your local boating authority.
CAPACITY AND WEIGHTING YOUR BOAT

Do not exceed the capacity warning label affixed to the boat in the helm area. The capacity limit is shown in the number of people and weight limit in pounds. The combined weight of people and gear must be considered when loading the boat. Ballast and fuel have been considered in the capacity limit and do not need to be added to the people and gear weight. Ballast weight above factory installed equipment must be calculated into the total weight of people and gear.

Although water intrusion and waves spilling inside a boat is an obvious boating hazard, this hazard can increase when weighting your boat for water sports such as wakeboarding or wakesurfing. Do not overweight the boat or exceed boat capacity. Use good judgment when using unbalanced weight in your boat. Concentrating weight in a rear corner of the boat for wakesurfing puts the top of the deck closer to water level. Backwash, large waves and choppy water are more likely to swamp the boat in this situation.

When loading your boat give separate attention to the bow area. Excess and unevenly distributed weight in the bow of the boat can create a water influx hazard, unstable steering conditions and even loss of control. Driver visibility can be reduced if the bow is overloaded or unevenly weighted.

**WARNING**

Excess and improper loading of bow area forward of windshield may cause water influx, operating instability, and loss of control resulting in injury or death. See Seating Capacities for bow limits.

Use good judgment when weighting your boat for any towed water sports. Educate yourself on the proper responses for the differing and potentially unsafe conditions you could encounter.

PROPER SEATING

Proper seating is an important element of boating safety. Proper seating consists of sitting with your buttocks in full contact with a seat cushion within easy reach of a suitable handhold or grab rail anytime the boat is underway. Handholds and grab rails should be used to secure oneself and prevent loss of balance. Do not sit in locations not designed as a seat. For instance, do not sit on seat backs, do not sit on the sides or gunwale of the boat, and do not sit on the sundeck while the boat is in motion. See examples below of proper sitting positions.

The driver must be aware of all passenger’s locations and positions, and passengers must stay alert to changes in direction.

*The boat is capable of quick and tight turns. Such maneuvers can cause unseated occupants to be thrown around or out of the boat. Alert passengers before changes in direction.*

CONTACT INFORMATION

If you have questions regarding the operation of your boat, accessory or options or questions in regard to Boat Safety, contact your dealer or Skier’s Choice, Inc. at 865-983-9924.
TYPICAL WARNING LABEL LOCATIONS — V-DRIVE MODELS

Warning labels are placed on your boat to alert you to potential hazards that may not be obvious. They also tell you how to avoid the hazard. Warning labels should never be removed and, if any label is damaged, it should be replaced as soon as possible.

WARNING PLATES & LABELS

Read and note ALL warning plates and labels from bow to stern that appear on the boat, including these.

If your warning decals should become damaged in any way please contact your Moomba Dealer or write Skier’s Choice Inc. to request replacement warning decals. The decals will be provided free of charge. Your boat’s serial number (located or the transom) must be included for warning decal requests.

Skier’s Choice, Inc. reserves the right to change warning labels without notification or incurring obligation. For a copy of the most current warning labels, please contact your dealer or Skier’s Choice, Inc.

© 2015 Skier’s Choice, Inc.
ABANDONING SHIP

**WARNING**

**BURN HAZARD**
- Swim against the current or wind if you abandon ship. Leaking fuel will float with the current and may ignite.
- When clear of danger, account for all who were on board, and help those in need.
- Use distress signal.
- Keep everyone together to make rescue easier.

**FLOODING, SWAMPING OR CAPSIZING**
- **STAY WITH THE BOAT!** A boat will usually float even if there is major hull damage. Rescuers can spot a boat much easier than a head bobbing in the water.
- Signal for help.

**COLLISION**
- Account for everyone on board.
- Check for injuries.
- Inspect structural damage.
- Reduce flooding.
- Signal for help.
- **STAY WITH THE BOAT!**

**GROUNDING**
Action depends on how hard the boat hits bottom and whether the boat remains stranded. If it is a simple touch, you may need only to inspect the hull. If you are aground, assess the situation before reacting. In some cases, throwing the boat into reverse can cause more damage.

**Basic Guidelines**
- Inspect damage to hull, propulsion and steering systems.
- Check for leaks. If water is coming in, stopping the flow takes priority over getting free.
- Determine water depth all around the boat and type of bottom (sand, mud, rocks, etc.). This will help you decide which way to move the boat.
- Determine if tide, wind or current will drive the boat harder aground or will help free it.
LEAKS

- Immediately switch on bilge pumps.
- Assign crew to operate manual pumps, if needed.
- If boat is taking on water, have someone take the helm while you manage damage control.
- Slow or stop to minimize inflow. However, if you can keep a hole above water by maintaining speed, do so.
- If possible, patch the outside with whatever material is available.

TOWING

![WARNING]

PERSONAL INJURY HAZARD
Towing or being towed stresses the boats, hardware and lines. Failure of any part can seriously injure people or damage the boat.

A recreational boat towing another is usually a last resort because of possible damage to one or both boats. The Coast Guard or a private salvage company is better equipped. A recreational boat may assist by standing by, and possibly keeping the disabled boat’s bow at a proper angle until help arrives. Only when conditions are ideal—that is, waters are calm, disabled boat is small, and one or both skippers know correct technique—should a recreational boat tow another.

Towing Vessel

- Be sure your boat will not run aground too.
- Because you are maneuverable and the grounded boat is not, you should pass the towline to the grounded boat.
- Use double-braided or braid-on-braid line. Never use three strand twisted nylon; it has too much elasticity and can snap back dangerously.
- Fasten the towline as far forward as possible on the upwind or up-current side of the towing boat. Fastening it to the stern will restrict maneuverability of the towing boat.
- If possible, use a bridle.
- Move slowly to prevent sudden strain on slack line.
- Be ready to cast loose or cut the line if the towing situation becomes hazardous.

Vessel Being Towed

- Attach the towline to the bow eye.
- If the boat has eyebolts in the transom for pulling skiers, a towline may be attached to a small bridle hooked to both eyebolts.
- If it is necessary to be towed after being freed, keep someone at the wheel to steer.

Both Vessels

- If you attach the towline to a fitting, be sure the fitting is fastened with a through bolt and is reinforced on the underside.
- Creating a bridle with a line around the hull or superstructure will distribute the load over a wide area; pad pressure points. This technique can be used on both the towing and towed boat.
- Keep lines clear of propellers on both boats.
- Keep hands and feet clear of the other boat.
- Never hold a towline after it is pulled taut.

PERSON OVERBOARD

- Immediately sound an alarm and keep pointing to the person overboard.
- Throw a life preserver even if the person is wearing a PFD. It will serve as a marker.
- Immediately stop or slow the boat, then circle toward the victim.
- Keep person overboard on helm side so operator has the person constantly in sight.
- Approach from downwind and move alongside into the wind for pickup.
- When almost alongside, stop the engine in gear to prevent dangerous propeller “windmilling.”
- As part of your emergency plan, consider what to do if you were alone and fell overboard *(e.g., wear PFD, keep signal device in PFD, attach emergency stop switch lanyard to yourself).*

DROWNING

- Swim to rescue a drowning victim only as a last resort.
- Immediate resuscitation is critical! At least two people on board should be certified in CPR.
- Keep the victim warm.
- Use care in handling. Spinal injury may exist if the victim fell overboard.
- Signal for help.

MEDICAL EMERGENCY

- In an emergency, you may be far from professional medical assistance. Be prepared. Take a first aid course, and carry a first aid kit. Be aware of special conditions that may affect anyone on board.
CARBON MONOXIDE

Carbon monoxide is an odorless, colorless, extremely toxic gas. Symptoms of carbon monoxide poisoning are dizziness, ear ringing, headaches, nausea and unconsciousness. A poisoning victim's skin often turns cherry red.

Have the victim breathe fresh air deeply. If breathing stops, resuscitate. A victim often revives, then relapses because organs are damaged by lack of oxygen. Seek immediate medical attention.

PROPULSION, CONTROL OR STEERING FAILURE

- Shut off engine.
- Put out an anchor to prevent drifting.
- Determine if you can fix the problem yourself. See engine operator's manual if engine is flooded.
- Signal for help.

RADIO COMMUNICATION

Radio is the boat operator's main method of receiving safety information and summoning aid. VHF-FM radio is the primary means of short-range communication. Single sideband radio (SSB) is used for longer range communication.

VHF-FM Channel 16 and SSB 2182 kHz are designated for emergency use. Such situations can be categorized as:

- **Emergency** - "MAYDAY, MAYDAY, MAYDAY" - Used when a life or vessel is in imminent danger.
- **Urgency** - "PAN-PAN, PAN-PAN, PAN-PAN" (pronounced PAHN-PAHN) - Used when a person or vessel is in some jeopardy less than indicated by a Mayday call.
- **Safety** - "SECURITY, SECURITY, SECURITY" (pronounced SAY-CURE-IT-TAY) - Used for navigational safety or weather warning.

An emergency situation will be hectic and there will not be time to learn proper radio procedure. **LEARN WHAT TO DO BEFORE YOU NEED TO DO IT.**

If you hear a distress call, stop all radio transmissions. If you can directly assist, respond on the emergency frequency. If you cannot assist, do not transmit on that frequency. However continue to monitor until it is obvious that help is being provided.

VISUAL DISTRESS SIGNALS

U.S. Coast Guard regulations require boats in coastal waters and the Great Lakes to carry visual distress signals for day or night use, as appropriate for the time of operation. Exempt from the day signals requirement, but not night signals, are boats less than 4.8 meters (16 feet), open sailboats less than 7.9 meters (26 feet), boats participating in organized events, and manually propelled boats.

- If you are required to have visual distress signals, at least three safety-approved pyrotechnic devices in serviceable condition must be readily accessible. They must be marked with a date showing the service life, which must not be expired.
- Carry three signals for day use and three signals for night use. Some pyrotechnic signals, such as red flares, meet both day and night use requirements.
- Store pyrotechnic signals in a cool, dry location. An orange or red watertight container prominently marked "Distress Signals" is recommended.

Other recognized visual distress signals include:

- Flames in a bucket
- Code flags November and Charlie
- Square flag and ball
- Black square and ball on orange background flag
- Orange flag (certified)
- Electric distress light (certified) - for night use only.
- Dye marker (any color)
- Person waving arms
- U.S. ensign flown upside down

Audible Distress Signals

U.S. Coast Guard regulations require one hand, mouth or power-operated whistle or horn, audible for at least a half mile.

Other recognized audible distress signals include:

- Radio communication (see Emergency Procedures - Radio Procedures - Radio Communication)
- Radiotelegraph alarm
- Position indicating radio beacon
- Morse Code SOS (3 short, 3 long, 3 short) sounded by any means
- Fog horn sounded continuously

© 2015 Skier's Choice, Inc.
BASIC BOATING RULES

You should be aware of these rules and follow them whenever you encounter another vessel on the water.

The rules presented in this manual are condensed and have been provided as a convenience only. Consult your local U.S. Coast Guard Auxiliary (USCGA) or Department of Motor Vehicles (DMV) for a complete set of rules governing the waters in which you will be using your boat. If you plan to travel—even for a short trip—you would be well served to contact the regional USCGA or DMV in the area where you will be boating.

Review and understand all local and state laws.

Any time two vessels on the water meet one another, one vessel has the right-of-way. It is called the stand-on vessel. The vessel which does NOT have the right-of-way is called the give-way or burdened vessel.

These rules determine which vessel has the right-of-way, and accordingly, what each vessel should do.

The vessel with the right-of-way has the duty to continue its course and speed, except to avoid an immediate collision. When you maintain your direction and speed, the other vessel will be able to determine how best to avoid you.

The vessel which does not have the right-of-way has the duty to take positive and timely action to stay out of the way of the stand-on vessel. Normally, the give-way vessel should not cross in front of the stand-on vessel. Slow down or change directions briefly and pass behind the other vessel. You should always move in such a way that the stand-on operator can see what you are doing.

This rule is called Rule 2 in the International Rules and says, “In obeying and construing these rules due regard shall be had to all dangers of navigation and collision, and to any special circumstances, which may render a departure from the above rules necessary in order to avoid immediate danger.”

ENCOUNTERING OTHER VESSELS

There are three main situations in which you may encounter other vessels and you must observe the Steering Rules in order to avoid a collision. These are:

- **Meeting** (you are approaching another vessel head-on)
- **Crossing** (you are traveling across the other vessel’s path)
- **Overtaking** (you are passing or being passed by another vessel)

Using the following illustration in which you are the boat in the center, you should give right-of-way to all vessels shown in the white area. In this instance, you are the give-way vessel. All vessels in the shaded area must yield to you as you are the stand-on vessel. Both you and the meeting vessel must alter course to avoid each other.

If you are meeting another power vessel head-on, and you are close enough to run the risk of collision, neither of you has the right-of-way. Both of you should alter course to avoid an accident. You should keep the other vessel on your port (left) side. This rule does not apply if both of you can clear each other by continuing your set course and speed.
When two power-driven vessels are crossing each other’s path close enough to run the risk of collision, the vessel that views the crossing vessel to the starboard (right) side must give-way.

If the other vessel is to the port (left) side, maintain your course and direction, provided the other vessel gives you the right-of-way as it should.

If you are passing another vessel, you are the give-way vessel. This means that the other vessel is expected to maintain its course and speed. You must stay out of its way as you clear it, altering course and speed as necessary.

Conversely, if you are being passed by another vessel, you should maintain your speed and direction so that the other vessel can steer itself around you.

There are three other rules to always remember when driving your boat around other vessels.

When navigating in narrow channels, you should keep to the right when it is safe and practical to do so. If the operator of a power-driven vessel is preparing to go around a bend that may obstruct the view of other water vessels, the operator should sound a prolonged blast on the whistle or horn—four to six seconds.

If another vessel is around the bend, it too should sound the whistle or horn. Even if no reply is heard, however, the vessel should still proceed around the bend with caution.

If you navigate these type of waters, you should carry a portable air horn, which are available from local marine supply stores.

All vessels which are fishing with nets, lines or trawls are considered under International Rules to be fishing vessels. Boats with trolling lines are not considered fishing vessels.

Fishing vessels have the right-of-way, regardless of position. These vessels, however, cannot impede the passage of other vessels in narrow channels.

Sailing vessels should normally be given the right-of-way. The exceptions to this are:

- When the sailing vessel is overtaking the power-driven vessel, the power-driven vessel has the right-of-way.
- Sailing vessels should keep clear of any fishing vessel.
- In a narrow channel, a sailing vessel should not hamper the safe passage of a power-driven vessel which can navigate only in such a channel.

The waters of the United States are marked for safe navigation by the lateral system of buoyage. The markers and buoys you will encounter have an arrangement of shapes, colors, numbers and lights to show which side of the buoy a boater should pass when navigating in a particular direction.

The markings on these buoys are oriented from the perspective of being entered from seaward while the boater is going towards the port. This means that red buoys are passed on the starboard (right) side when proceeding from open water into port, and black buoys are to port (left) side. When navigating out of port, your position to the buoys should be reversed: red buoys to port and black buoys to starboard.

Many boating bodies of water are entirely within the boundaries of a single state. The Uniform State Waterway Marking Systems has been devised for these waters. This system uses buoys and signs with distinctive shapes and colors to show regulatory or advisory information.

These markers are white with black letters and orange borders. The information signifies speed zones, restricted areas, danger areas and general information.

Remember: Markings may vary by geographic location. Always consult local boating authorities before driving your boat in unfamiliar waters.

*(See examples of buoys and markers next page.)*
BUOYS & MARKERS

MAIN CHANNEL BUOYS

LIGHTED BUOY (Port Hand)
Odd number, incremental toward head of navigation. Leave to port (left) proceeding upstream.

LIGHTED BUOY (Starboard Hand)
Even number, incremental toward head of navigation. Leave to starboard (right) proceeding upstream.

LIGHTED SAFE WATER BUOY
No number. Marks mid-channel. Pass on either side. Letter has no lateral significance; it is used for identification and location purposes.

LIGHTED PREFERRED CHANNEL TO PORT BUOY
No number. Topmost band red; preferred channel is to the left of the buoy. Letter has no lateral significance; it is used for identification and location purposes.
OUTBACK V SPECIFICATIONS:

Overall Length w/o Platform: 20' 6" = 6.25M
Overall Length w/Platform: 22' 6" = 6.84M
Overall Length w/Platform & Trailer: 24' 3" = 7.40M
Width (Beam): 96" = 2.44M
Overall Width w/Trailer: 102" = 2.59M
Draft: 24" = 0.61M
Weight - Boat Only: 3,300 lbs = 1,497K
Weight - Boat & Trailer: 4,150 lbs = 1,882K
Capacity - Passenger: 12
Capacity - Weight: 1,600 lbs = 725K
Capacity - Fuel: 39 gals = 147L
Capacity - Ballast (Standard): N/A
Capacity - Ballast (Optional): 1,200 lbs = 544K
Engine: EFI, 330 HP, MPI w/CAT V 8 = 5.7L

NOTE: Add weight for Fuel, Batteries, Options & Gear to determine true boat weight.

MONDO SPECIFICATIONS:

Overall Length w/o Platform: 20' 6" = 6.25M
Overall Length w/Platform: 22' 6" = 6.84M
Overall Length w/Platform & Trailer: 24' 3" = 7.40M
Width (Beam): 99" = 2.51M
Overall Width w/Trailer: 102" = 2.59M
Draft: 25" = 0.64M
Weight - Boat Only: 3,800 lbs = 1,723K
Weight - Boat & Trailer: 4,650 lbs = 2,109K
Capacity - Passenger: 13
Capacity - Weight: 2,000 lbs = 907K
Capacity - Fuel: 39 gals = 147L
Capacity - Ballast (Standard): 1,300 lbs = 589K
Capacity - Ballast (Optional FRT): 500 lbs = 227K
Engine: 400 = 6.2L

NOTE: Add weight for Fuel, Batteries, Options & Gear to determine true boat weight.
MOBIUS LSV SPECIFICATIONS:

Overall Length w/o Platform ........................................... 21’6” .... 6.55M
Overall Length w/Platform ........................................... 23’0” .... 7.10M

Capacity - Ballast (Optional) ............................... 2,500 lbs .... 1,133K
Engine ........................................................................... 400 .... 6.2L

NOTE: Add weight for Fuel, Batteries, Options & Gear to determine true boat weight.
BREAK IN

Taking care to properly break in your new engine will pay off in the long run. In our years of field testing, we have proven that an Indmar engine, when properly broken in according to our simple procedures, will last longer, run better and have fewer repairs over its lifetime.

Your new engine does not require an elaborate break-in procedure. Just follow these simple instructions and you are off to a great start.

The three (3) most important aspects of new engine break-in are:
- Avoid running engine at high speeds.
- Do not carry a heavy load (passengers, gear, etc.).
- Vary your boat speed during break-in. Do not run at the same RPM for a long period of time.

BREAK-IN STEPS
- For the first hour, do not exceed 2,000 RPM.
- For the second hour, do not exceed 3,000 RPM.
- For the next seven hours, do not exceed 4,000 RPM.

BREAK-IN TIPS
- Avoid fast accelerations and do not carry (or pull) a heavy load during this period.
- Always let engine warm up gradually before acceleration.
- Check oil frequently. During the first 50 to 100 hours, an engine can use more oil than usual. Maintain oil at a proper level at all times (do not overfill).
- Monitor transmission fluid levels.
- Report abnormal noises or vibrations to your dealer.
- Keep an eye out for loose mountings, fittings, nuts, bolts and clamps.

During the BREAK-IN process, engine temperature should be carefully monitored and speed should be reduced if overheating is evident. ALSO, PLEASE REFER TO ENGINE OWNER’S MANUAL FOR BREAK-IN INFORMATION.

NOTICE: PLEASE REFER TO ENGINE OWNER’S MANUAL for maximum RPM and engine break-in procedure.

After the first 10 to 20 hours of operation, take your boat to the dealer for its first oil and filter change, as well as an engine checkup. Remember to keep a sharp eye on all gauges and warning lights during these first hours of operation. Report anything unusual to your dealer.

After the break-in procedure is over, your boat may be operated continuously at any speed.

⚠️ CAUTION
Do not exceed maximum RPM recommended for your engine. Exceeding the maximum RPM may result in damage to the engine.

⚠️ DANGER
Before starting your engine you must open the engine box and check engine compartment and bilge for gasoline and oil vapors.
**Maximum Capacities**

In compliance with United States Coast Guard Regulations, Moomba Boats meet or exceed all safety standards designed for recreational boats. To ensure safe handling and performance, each Moomba boat displays a maximum capacity sticker (see sample), stating the maximum passenger weight load allowable.

**NOTE:** Refer to the Maximum Capacity Sticker on your boat for allowable loading.

⚠️ **WARNING**

Do not exceed the maximum capacity of the boat.

**Coast Guard Regulations**

The United States Coast Guard boating regulations prescribe minimum standards of safety to be met and maintained by all watercraft. It is necessary that your boat remain in compliance with these regulations.

The staff at Ski'r's Choice, Inc. recommend that all boat operators complete a Coast Guard approved boating safety course.

**Canvas Cover**

Your Moomba boat cover is made from the finest canvas and webbing to ensure that your boat will be protected in the off season. The cover has been designed to fit securely around each boat. If your new cover does not seem to be snug, a shrinkage allowance has been sized in.

**Use the following procedure when covering the boat:**

- Be sure that the cover fits snugly at the bow then unfold from front to back.
- Be sure to install cover pole(s) and adjust to proper height, using set screw on pole(s). This will keep water from gathering in the center, which can damage the cover.
- Secure all fastening straps around the trailer frame.
- Pull the draw cord equally from both sides and tie off to the lifting eyes on the stern in accordance with the illustration.

**Folding Cover**

When folding the cover for storage, be sure the cover is dry. Take care not to scratch the canvas finish against rough surfaces. Store in a dry location.

**Cover Repair**

If the cover becomes damaged, immediately parch and reseal the area. Use a tent seam sealer to reseal any new stitches. Spray fabric guard on scraped or worn surfaces. Canvas tears should be repaired professionally and stitches sealed to prevent leakage.

⚠️ **CAUTION**

Your mooring cover is not designed for trailering. Trailering with your cover installed may cause premature cover failure and boat damage. This damage is not warrantable.
A standard pre-starting procedure should be always be followed before the first start-up of the day.

1. Check the engine oil level.
2. Check for gasoline fumes in bilge or engine compartment.
3. Operate engine blower for four minutes before starting the engine to remove any fumes.
4. Check manual operation of bilge pump. Make sure bilge areas are empty.

Other items might also be inspected, depending on the boat and its use. It is advisable to formulate a check list particular to the equipment and operation of your boat.

REFER TO THE BOATMAN’S CHECKLIST OF THIS MANUAL.
Consult the local Coast Guard Auxiliary or Power Squadron for full details on boating safety.

NOTE: Add-on electrical accessories should never be connected to the ignition terminal or ignition circuit.

IMPORTANT: DO NOT continue to operate the starter for more than 15 seconds at a time without pausing to allow the starter motor to cool down for at least two minutes. This will also allow the battery to recover between starting attempts. PLEASE REFER TO ENGINE OWNER’S MANUAL FOR ADDITIONAL DETAILS.

⚠️ DANGER
Do not start engine if gas fumes are present!

⚠️ DANGER
BEFORE STARTING ENGINE, BE SURE THAT THE SHIFT SELECTOR IS IN NEUTRAL.
The correct starting procedure depends upon the type of engine. Please refer to the engine manual before starting.

**To Start Electronic Fuel Injection (EFI) Engine**

- Place shift selector in Neutral with the throttle in the upright (zero) position. (If throttle is not in the idle position, the throttle position sensor will not allow the engine computer to proceed with a normal starting procedure).
- Turn Ignition Key to Start Position to operate the starter.
- Release the key when engine starts (key will return to run position).
  - Allow the engine to establish a good idle (30 to 60 seconds) before getting underway.
  - Shift slowly into forward or reverse, allowing the transmission time to engage before powering up.

NOTE: It is normal for the idle to speed up in cold start conditions.

⚠️ CAUTION
DO NOT continue to operate the starter for more than 15 seconds at a time without pausing to allow the starter motor to cool down for at least two minutes. This will also allow the battery to recover between starting attempts. PLEASE REFER TO ENGINE OWNER’S MANUAL FOR ADDITIONAL DETAILS.

NOTE: Should the EFI engine become “flooded” use the following procedure to start:

- Place shift selector in Neutral and disengage the transmission by pushing the transmission lockout button located at the bottom of the lever.

- With the transmission disengaged, push the lever forward to full throttle position. (This will cause the computer to shut off the fuel injectors, which will allow the engine to clear of excess fuel during starting).
- Turn the Ignition Key to Start Position and operate the starter for no more than 15 seconds at a time, until the engine starts.
- When the engine starts, back off the throttle and allow the engine to establish a good idle (30 to 60 seconds).
- Return the throttle to idle position and the transmission lockout will automatically reengage the transmission in neutral position.
- When ready to get underway, shift slowly into forward or reverse, allowing the transmission time to engage the gearing before powering up.

**Warm-Up**

Always let engine warm up to normal operating temperature before accelerating.
The throttle lever controls both the throttle and the transmission. The idle position (normally vertical) is the zero throttle position and the neutral position for the transmission. A safety ring (umbrella) keeps the lever from being accidentally moved to engage the transmission.

To place the transmission into gear, with your hand placed over the lever ball, pull up on the safety ring (umbrella) and slowly push the lever into forward gear or slowly pull the lever back into reverse gear.

⚠️ CAUTION ⚠️

Never shift the lever directly from the neutral (vertical) position into a speed position.

• To prevent damage to the transmission, always allow the transmission time to engage before accelerating the engine.
• Once the transmission is engaged, you may accelerate as quickly as you like.

The Transmission Lockout button allows the transmission to be disengaged while giving the throttle full operating range. With the lever in the idle position (normally vertical), push the button located at the bottom of the lever to disengage the transmission. The throttle may then be operated in any open position (forward of neutral or back of neutral upright position). Return the throttle to idle position, and the transmission lockout will automatically reengage the transmission in neutral position.
REAR DRAIN PLUG

The rear drain plug is located at the back of the boat, near the bottom of the transom. It is extremely important that the drain plug is always checked before starting the engine. The drain plug should be secured in place using a wrench.

⚠️ WARNING

DO NOT start the engine until the drain plug is checked and secured in place. DO NOT try to install the drain plug while the engine is running!

CENTER DRAIN PLUG - V-DRIVE MODELS

On V-drive models the center drain plug is accessed via the access cover in the center floor panel.

It is extremely important that the drain plug is always checked before starting the engine. The drain plug should be secured in place using a wrench.

⚠️ WARNING

DO NOT start engine until center drain plug is checked and secured in place.
**Fuel Precautions**

**WARNING**
- AVOID SERIOUS INJURY OR DEATH.
- LEAKING FUEL IS A FIRE AND EXPLOSION HAZARD.
- INSPECT SYSTEM REGULARLY. EXAMINE FUEL SYSTEM FOR LEAKS AND CORROSION AT LEAST ANNUALLY.

**Indmar 6.2L Engines**
Use a gasoline with a minimum octane rating of 89. See engine owner’s manual for more information.

**Indmar 6.2L Supercharged Engines**
Use a gasoline with a minimum octane rating of 93. See engine owner’s manual for more information.

**WARNING**
DO NOT use gasoline containing methyl alcohol (methanol). Methanol can damage your boat’s fuel system.

**CAUTION**
E-10 fuels require fuel stabilizers that are specifically designed for E-10 fuels to help prevent moisture absorption, phase separation and gasoline stabilization.

**CAUTION**
Gasoline stabilizer should be added to the fuel tank when the boat is used infrequently or whenever your boat will not be used for two weeks or more. During storage always add gasoline stabilizer to reduce gumming or tank sludge.

**Fuel Cap**

The fuel cap is located on the rear deck, 2-4 feet from the stern. To open, push black tab located on the bottom side of the gas cap. When the black tab is pushed, the gas cap will hinge upward.

To close, push the gas cap down. When the gas cap is completely closed a “click” sound should be heard. The audible “click” ensures that the gas cap is closed and sealed.

The new fueling system prevents spillage from occurring. Air is allowed to escape from the front and rear of the gas tank. Both vents are on a central fuel line, which run to a central holding container for the vapor. The vapor is released over time. This type of venting system allows for the tank to be filled without building any back pressure. Without back pressure, spillage should be completely eliminated from the fueling process.

This venting system doesn’t allow water to enter the fuel system. In the unlikely event that water runs up against the fuel vent, the fuel vent has a one-way valve. The one way valve allows for air to release, but denies water from entering. The gas cap itself is sealed with a rubber seal. When the gas cap is “clicked” closed the seal prevents any water from entering the system.

**Fueling**

**WARNING**
- AVOID SERIOUS INJURY OR DEATH.
- FIRE, EXPLOSION AND SPLASHING FUEL HAZARD.
- IF TANK IS OVERFILLED, FUEL WILL DISCHARGE OUT THIS PORT.

**WARNING**
SPARKS WHILE FUELING COULD CAUSE AN EXPLOSION!

**Before Fueling:**
1. Turn off engine.
2. Turn off ignition.
3. Extinguish cigarettes or any open flame.

**While Fueling:**
- Keep hose nozzle in contact with fill pipe to provide a ground against static sparks.
- Fill tank at a slow rate to avoid any spillage.

**WARNING**
**E15 FUEL WARNING**
- DO NOT USE E15 FUELS! E15 fuel WILL damage your engine and it will not operate.
- THIS DAMAGE IS NOT COVERED BY ANY WARRANTY

**Filling the Tank**

**CAUTION**
Be especially careful when filling the fuel tank. **DO NOT** overfill the tank. Overfilling can damage the system’s carbon filters and render the emissions control useless.

If fuel is spilled on stripes or decals, apply a common bath cleaner (nonabrasive) and wipe with a damp cloth. Rinse the spill area with clean water.
OUTBACK V DASH

SPEED CALIBRATION - OUTBACK

Speed may be checked using a stopwatch and a standard slalom course. Adjust the speedometer needle by twisting the adjuster knobs located beneath the dash panel.

Speed can also be set by using a hand-held GPS.

M SERIES DASH
Warning Stickers
Always heed the dash mounted warning stickers.

WARNING
GASOLINE VAPORS CAN EXPLODE!

BEFORE STARTING ENGINE:
- Check engine compartment for gasoline or vapors.
- Operate blower for four minutes before starting engine.
- Run blower below cruising speed.
- Turn off engine before using ski platform.

Tachometer

The tachometer registers the operating speed of the motor's shaft output and may be used as an alternative to speedometer if weight and water conditions permit.

DO NOT exceed the recommended RPM during break-in and normal operation of your motor. Exceeding the manufacturer's suggested RPM may cause damage to the engine.

Speedometer

The speedometer indicates the water speed of the boat in miles per hour. It is recommended that the speedometer be checked for accuracy after each 100 engine hours.

Speed may be checked using a stopwatch and a standard slalom course. Adjust the speedometer needle by turning the knob at the bottom of the gauge.

NOTE: If the speedometer registers erratically, check speedometer pickups.

Fuel Gauge

The fuel gauge is located on the speedometer or tachometer. This gauge indicates the approximate quantity of fuel remaining in the tank when the ignition switch is in the "ON" position.

NOTE: DO NOT run the tank to empty. To prevent condensation from forming in the tank, it is recommended that the tank be filled when the gauge indicates 1/4 tank of fuel remaining.

Engine Hours

Engine hours should always be noted and documented so that required maintenance and lubrication changes may be performed at the proper intervals. The engine hour meter indicates the number of hours the engine has run.

Outback V: Engine hours are shown on the tachometer.

M Series: Engine hours are shown on the Digital Cruise Pro II home screen in the bottom left corner.

Speedometer Pickups

The speedometer pickup is located on the bottom of the hull. The pickup measures the speed of water passing the paddlewheel. Poor water conditions or foreign material may clog the pickup causing the speedometer to register incorrectly.

Inspect the paddlewheel and remove any foreign material only when engine is off. Please see paddlewheel owner manual in the Boat Owner’s Packet for more information.
**Volmeter (Inboard)**

The volmeter indicates whether the battery is charging or discharging. The needle should be located in the normal range while the engine is running.

If the volmeter does not register in the normal range, there may be a problem within the electrical system. It is normal for the volmeter needle to fall when starting the engine. Normal range is 12 to 14 volts.

---

**Temp Gauge**

The temperature gauge/readout indicates the engine coolant temperature while the coolant is circulating inside the engine. Engine operating temperatures will vary depending on the weather conditions and engine load. Normal operating temp range is between 160 degrees and 180 degrees.

**NOTICE:** Refer to your Engine Owner’s Manual for additional details.

---

**Oil Pressure Gauge**

The oil pressure gauge indicates the oil pressure in the engine while the engine is running.

If the oil pressure remains below the normal range of 10 to 80 psi, stop the engine immediately. If engine is allowed to run while oil pressure is too low, permanent engine damage may occur.

**CAUTION**

Running the engine with low oil pressure may cause severe engine damage.
Setting Units

The depth sounder can display depth in either standard or metric units.

Perform the following steps to change the display units:

- Simultaneously press the up and down buttons. Either the FT or M units indicator display text will flash.

THEN...

- To set feet units, press the up button. The FT indicator display text will flash for five seconds and return to normal mode display with feet as the current units.

OR...

- To set meter units, press the down button. The M indicator display text will flash for five seconds and return to normal mode display with meters as the current units.

NOTE: When power is applied or removed and reapplied, the units display defaults to feet units.

Setting Deep Alarm (continued)

To set the deep alarm, perform the following:

1. Press the down button. The current deep alarm depth setting will display.

2. Press the up or down button to increase or decrease respectively the deep alarm depth value. Pressing either button once will change the depth value in 1-foot or 0.1 meter increments. Holding either button will change the depth value in 9-foot or 1-meter increments per second.

3. After setting the depth value, the alarm and down arrow icons will blink for five seconds. Then the display will return to normal operating mode with the alarm and down arrow icons displayed.

When triggered, an audible alarm sounds for ten seconds while flashing the warning LED, alarm and down icons on the display. After ten seconds, the audible alarm mutes but the LED and display icons continue to flash.

NOTE: When power is removed from the instrument, all depth settings are returned to “000”.

Setting Shallow Alarm

The shallow alarm function can be set for depths ranging from 3 feet (1.0 Meter) to 200 feet (60.9 Meters). An alarm triggers when the water depth is less than the set value.

To set the shallow alarm, perform the following:

1. Press the up button. The current shallow alarm depth setting will display.

2. Press the up or down button to increase or decrease respectively the shallow alarm depth value. Pressing either button once will change the depth value in 1-foot or 0.1 meter increments. Holding either button will change the depth value in 9-foot or 1-meter increments per second.

3. After setting the depth value, the alarm and up arrow icons will blink for five seconds. Then the display will return to normal operating mode with the alarm and up arrow icons displayed.

When triggered, an audible alarm sounds for ten seconds while flashing the warning LED, alarm and up icons on the display. After ten seconds, the audible alarm mutes, but the LED and display icons continue to flash.

NOTE: When power is removed from the instrument, all depth settings are returned to “000”.

Setting Deep Alarm

The deep alarm function can be set for depths ranging from 3 feet (1.0 meter) to 200 feet (60.9 meters). An alarm triggers when the water depth is greater than the set value.
Out of Range Display

If the display indicates three horizontal bars as shown, the depth sounder indicates an out of range, inaccurate or incomplete data condition.

An out of range condition occurs when the depth reading is less than 2.5 feet (3.0 meters) or greater than 200 feet (60.9 meters).

Inaccurate or incomplete data will cause an out of range condition when operating in extremely dirty water, very soft bottom or at high speeds. A faulty or improper transducer connection can also cause an out of range error condition.

TROUBLESHOOTING

Instrument Does Not Turn On
- If applicable, check main power supply fuse to the unit. If it is blown, replace it with a 1 amp, normal blow fuse. If in-line fuse is used, clean all corrosion from the fuse housing or replace the fuse holder assembly if necessary.

Instrument Does Not Turn On (continued)
- Check the power cable connection. Be sure that the unit is connected to a known power source:
- RED wire to positive, BLACK wire to negative or ground.
- Ensure that the power source is powered using a test light or some other reliable form of testing 12 volt power.
- If you are sure that the unit is receiving power and is still not functioning, please contact Customer Service for assistance.

Random or Flashing Bottom Reading
- Under certain circumstances, the depth sounder may not perform at the best of its ability. Extremely dirty water, very soft bottom, high speeds, deep water, or a combination of the above will result in incomplete or inaccurate readings.
- Check the transducer cable connection on the back of the unit.
- Contact Customer Service for assistance if you are unable to correct the problem.

User Interface/Display Features

- **Warning Red LED**: Warning LED flashes when an alarm condition exists.
- **Feet Depth Indicator FT**: FT indicator appears when display is set to show depth in English feet units.
- **Meter Depth Indicator M**: M indicator appears when display is set to show depth in SI-Metric Meter units.
- **Backlit Display**: Backlit LCD display permits easy reading during low ambient light conditions.
- **Alarm Indicator**: Alarm icon appears when the shallow or deep alarm functions are active.
- **Shallow & Deep Set Icons**: Icons indicate which alarm function, shallow or deep, is currently active.
- **Depth Display Value**: Depth units display in either Feet or Meters. Decimal points active for SI units only.
- **Up & Down Buttons**: Press up or down buttons to change/set depth alarm value setting or change units.
**Stereo**

Please refer to your stereo owner's manual for proper operation instruction.

**Adjusting The Boat Speed**

1. The speed of the boat can be adjusted faster by pressing and holding the “+” side of the momentary rocker switch, which will increase the engine speed relative to the throttle position, therefore to go faster than the initial set point.

2. The speed of the boat can be adjusted slower by pressing and holding the “-” side of the momentary rocker switch, which will decrease the engine speed. The engine will decrease speed below the initial set point.

**Dismounting The System**

1. The Digital Cruise System will disengage throttle control when the throttle is brought back below the current speed set position at that time. If the engine speed has been changed using the “+” or “-” momentary rocker switch during operation, the latest speed position is the point where the cruise system will disengage throttle control once the throttle position is lower than that relative speed position. The system will reengage once the throttle position is advanced back above the last set speed position.

2. The system can be completely disengaged by turning the system “OFF” using the rocker switch. If this is done while the boat is at speed and the system is engaged, the throttle will have to be moved below the set speed position before it will completely disengage and allow the operator complete throttle control.

**Digital Cruise - Activating The Cruise System**

1. Accelerate the boat up to the desired cruising speed.

2. Engage the Digital Cruise System by moving the rocker switch from “OFF” to “SET”. At this point the cruise system will take over throttle control and maintain the speed at which it was set. The small red LED light will come on to let the operator know that the system is engaged. The red LED light will remain on until the system is turned “OFF” using the rocker switch.

3. The system will not allow any more throttle input than the position of the throttle arm. Therefore, the throttle arm should be advanced completely after the initial engagement of the system to allow the system to maintain the set speed with different throttle positions required such as when the boat turns.

**Optional Digital Cruise Pro II**

See pages 54-56 for detailed operating instructions for the optional Digital Cruise Pro II.
OUTBACK V SERIES SWITCH PANEL

NAVIGATION LIGHTS SWITCH
The Navigation Light switch supplies power to the Bow Light, the Stern Light and the Pole Light.

Operation (Refer to Illustration Below):
When underway during night time operation, set the switch in the NAV position to activate all of the running lights.

When docked or at anchor, set the switch in the ANC position to activate only the pole light.

COURTESY LIGHT SWITCH
The Courtesy switch supplies power to the lighting throughout the boat.

BILGE PUMP SWITCH
The Bilge Pump switch operates in two positions. The manual position is used to verify that the pump is operational. The automatic pump function is engaged at all other times so that any excess water in the bilge may automatically be pumped out.

STEREO SWITCH
The Stereo switch supplies power to the stereo unit. The switch must be turned on before the stereo can be played.

ACCESSORY SWITCH (2 POSITIONS)
The Accessory switch supplies power to an extra circuit for accessories that may be added.

HEATER SWITCH
The Heater switch supplies power to the heater.

NOTICE
If any lights, bilge, stereo, courtesy lights, or accessories fail to operate, press the appropriate circuit breaker located under the switch.

Switch configuration may vary slightly based on options. If you have any questions regarding operation, please contact your dealer or Skier's Choice, Inc.
NAVIGATION LIGHTS SWITCH
The Navigation Light switch supplies power to the Bow Light, the Stern Light and the Pole Light.

Operation (Refer to Illustration Below):
When underway during night time operation, set the switch in the NAV position to activate all of the running lights.

When docked or at anchor, set the switch, in the ANC position to activate only the pole light.

COURTESY LIGHT SWITCH
The Courtesy switch supplies power to the lighting throughout the boat.

DOCKING LIGHT SWITCH
The Docking Light switch supplies power to the docking lights. Switch must be turned on before lights will operate.

BALLAST SWITCHES
The Ballast switches supply power to the ballast pumps. Configuration may vary depending on the number of ballast bags.

ACCESSORY SWITCH (3 POSITIONS)
The Accessory switch supplies power to an extra circuit for accessories that may be added.

NOTICE
If any lights, bilge, stereo, courtesy lights, or accessories fail to operate, press the appropriate circuit breaker located under the switch.

Switch configuration may vary slightly based on options. If you have any questions regarding operation, please contact your dealer or Skier's Choice, Inc.
**Ignition Switch**

Located on the port side of the dashboard, the ignition switch has four positions. In the vertical position, the ignition is “OFF”.

One position clockwise is the “ON” position and this will power the switches and energize the motor.

The full clockwise position is the “START” position.

**NOTE:** All electrical equipment should be turned off when the boat is in storage.

---

**Tilt Steering**

Tilt steering may be adjusted up or down in five different locking positions. To adjust, depress the tilt lever located beneath the bezel and move the steering wheel to the desired position. Release the lever to lock the wheel into place.

---

**WARNING**

GASOLINE VAPORS CAN EXPLODE.

BEFORE STARTING ENGINE:

- CHECK ENGINE COMPARTMENT FOR GASOLINE VAPORS
- OPERATE BLOWER FOR 4 MINUTES.
- VERIFY BLOWER OPERATION.
- RUN BLOWER BELOW CRUISING SPEED.
- ENGINE SHOULD BE OFF BEFORE USING SKI PLATFORM.

---

**Horn**

The Horn Switch is located on the switch panel to the left of the steering wheel.

**Horn/Whistle Signals**

- **One Long Blast:** Warning Signal (Coming out of slip)
- **One Short Blast:** Pass on my Port Side
- **Two Short Blasts:** Pass on my Starboard Side
- **Three Short Blasts:** Engines in Reverse
- **Four or More Blasts:** Danger Signal

1. **OVERTAKING/PASSING:** Boat being passed has the right-of-way. KEEP CLEAR.
2. **MEETING HEAD-ON:** Keep to the right.
3. **CROSSING:** Boat on the right has the right-of-way. Slow down and permit him to pass.
SAFETY LANYARD/ENGINE SHUT-OFF SWITCH

Your Moomba is equipped with a Safety Lanyard/Engine Shut-Off switch. In order for the engine to run, the plastic tip of the safety lanyard must be attached to the switch. If the clip is removed from the switch, the engine will not run.

⚠️ WARNING
Avoid serious injury or death. Attach Safety Lanyard to driver prior to operating the boat.

CHECK ENGINE LIGHT

Your boat has a red check engine light. It functions much the same as the check engine light in your car. If the engine control module senses certain engine parameters out of range or a trouble code is set, the light will come on.

If the light does come on, stop using the boat and see an authorized Indmar or Skier’s Choice Service Center.
Optional Ballast System

The optional ballast system is an electronically controlled ballast system that can be operated from the driver’s seat. Each switch allows independent filling and draining of each ballast container by simply hitting the fill or drain switch. If the system fails to fill or drain, you may check the resettable breaker on the switch panel or the separate ballast fuse block located under the dash area. The ballast bags or tanks can be found in the front ski locker or in the rear v-drive storage areas depending on the the mode and ballast system.

⚠️ CAUTION
When bags begin to vent, shut off!

⚠️ WARNING
DO NOT OVERFILL BALLAST BAGS!

Care should be taken that the ballast bags are situated properly with the fill hose on top and drain hose on bottom and that all fittings are installed securely. The bags should not be twisted and the bags should be free to expand and drain completely. Care should be taken to prevent sharp objects from coming in contact with the bags. Cuts and punctures to the bags are not warrantable.
Ballast Water Strainer

The optional ballast system also includes an in-line water strainer before the manifold. This strainer will keep debris out of the solenoid valve and should prevent the valve from getting clogged up and forced open. The strainer cover should be removed periodically and the filter screen cleaned to prevent debris buildup on the mesh screen. Be careful when removing the cover not to lose the O-ring used to seal the cover. Also, the strainer should be removed and drained during winterization.

To fill the ballast system, press the fill switch. To empty, press the empty switch. With the ballast full, the boat may porpoise at speeds above 25 mph.

⚠️ WARNING

Empty ballast before trailering the boat. DO NOT trailer boat with ballast full!
The Gravity Ballast System in your boat is an electronically controlled ballast system that can be operated from the driver's seat. The manual switches for this three position system are located in the switch panel directly below the shifter mechanism.

The Ballast System in your boat is an integrated and logically controlled system. At the heart of the system is a series of reversible pumps that use impellers to pump water in and out of the ballast system. The controller for the system runs the pumps an appropriate amount of time to fill and to empty the bags.

**Filling the System** - In normal operation of the system, flipping one of the switches to “Fill” will start the system filling the associated ballast. The pump will automatically turn off when the appropriate amount of time to fill the system has been reached. The light on the switch will still be luminated as it is in the “Fill” position, but the pump will not be running. The switch should be turned back to the “off” position when the pump stops running.

**Emptying the System** - In normal operation of the system, flipping one of the switches to “Empty” will start the system emptying the associated ballast. The pump will automatically turn off when the appropriate amount of time to empty the system has been reached. The light on the switch will still be luminated as it is in the “Empty” position, but the pump will not be running. The switch should be turned back to the “off” position when the pump stops running.

**Ballast Pump Impellers** - The pumps that fill and drain the ballast system use an impeller. Your Moomba ballast impeller uses the latest polymer technology in an effort to have the longest service life possible. The impellers are a wear item and different use patterns, water types, debris, etc. can greatly affect the service length of the impeller. As the impellers wear, the amount of water that is pumped into and out of the ballast system is reduced. Running the pumps without water will greatly accelerate the wear and prolonged running of the pumps without water will damage the impeller to the point that they will require immediate replacement.

Note: Impellers are a wear item and not covered by warranty.

</table>
IGNITION KEYS

Two ignition keys are provided with the boat. Key entry into the ignition may sometimes be difficult due to the rubber boot protector. Please do not unduly force the key into the ignition. Key tumblers are located vertically, so the key should be vertical when placed into the switch.

NOTE: Ignition key blanks may be purchased through your Moomba dealer.

MIRRORS

The rear view mirror is installed as a standard item. The mirror is adjustable so that it may be set for each driver.

- Mirror should always be checked before driving.
- Mirror angle will change with each new driver.

FUEL CAP

NOTE: The gas cap is sealed by a rubber O-ring. Ensure the cap is clicked shut to properly seal.

WARNING

- AVOID SERIOUS INJURY OR DEATH.
- FIRE, EXPLOSION AND SPLASHING FUEL HAZARD.
- IF TANK IS OVERFILLED, FUEL WILL DISCHARGE OUT THIS PORT.
**Driver’s Seat & Seat Adjustment**

The Rise-R Seat is a unique driver seat enhancement. The front edge of the driver’s seat cushion lifts up to give the driver a taller sightline. To switch the seat to the raised position, use two hands to lift and push the front edge of the seat cushion up and back until it is sitting on the rear half of the driver’s seat cushion. To switch to the lower position, use two hands to push the Rise-R seat cushion forward and down.

**CAUTION**

Be careful of the articulating hinge. Do not place fingers or other objects in the hinge mechanism during use.

The driver’s seat may be adjusted forward or backward by moving the lever below the front of the seat. Use body pressure to move the seat to the desired position. Release the lever then check to feel the seat lock into place.

**CAUTION**

After adjusting the seat, be sure that it has locked into place by pushing forward and backward until it has securely latched.

DO NOT attempt to adjust the driver’s seat while the boat is moving.

---

**V-Drive Engine Compartment**

To access the engine compartment, turn latch and pull to raise the center sun deck lid. When the ski lockers and engine compartment lids are closed, the upholstered lids double as a cushioned sun deck.

**Pulley & Belt Warning!**

Pulleys and belts can cause severe injury! Never open the motor box while the engine is running or while the boat is underway!

Remember, after running, the engine is extremely hot and should not be touched or repaired until it has cooled.
**Fire Extinguisher**

A standard Coast Guard approved fire extinguisher is provided on all Moomba boats. The fire extinguisher is located on the port side behind the observer’s seatback.

(Refer to label instructions for use.)

**Glove Box**

To open the glove box, press the black round cylinder down while lifting the black finger tab. Once open, the lid is supported by a spring.

**Ski Pylon**

The ski pylon is only to be used to pull skiers. **DO NOT use the ski pylon to hoist the boat.** Only use the lifting rings for this purpose.

**WARNING**

- AVOID SERIOUS INJURY OR DEATH.
- TOW PYLON SHOULD BE USED ONLY FOR TOWABLE WATER SPORTS DEVICES.
- DO NOT USE TOW PYLON FOR OTHER TOWABLE OBJECTS OR TOWING BOATS.
- TOW PYLON IS NOT DESIGNED FOR VERTICAL EXTENSIONS. ANY MODIFICATIONS TO THE TOW PYLON OR ITS MOUNTINGS MAY RESULT IN DAMAGE TO THE BOAT AND INJURY TO THE USER.
- DO NOT SIT BEHIND THE TOW PYLON WHEN IN USE.

**WARNING**

The use of pylon extensions can severely effect the overall handling of the boat. Follow pylon extension manufacturer’s directions for mounting.

**NOTE:** With use the ski pylon may loosen. Should this occur, see your Moomba Dealer for service.
Some Moomba models are equipped with an optional Moomba Oz HD towing tower. The tower is designed with practicality, aesthetics, and the consumer in mind. 23/8 in. tubing is used to provide additional strength and stability to enhance the performance and functionality of the tower. The larger diameter tubing also allows for the possibility of four wakeboard/surfboard racks to be mounted (two on port side, two on starboard side). The fold assist feature makes it easier to raise or lower the tower (two individuals working together is recommended). The optional Moomba Oz HD towing tower is NOT intended to be used to tow skiers, barefooters, tugs, or multiple wakeboarders. Such use will void any warranties written or implied.

**WARNING**
Be sure that all bolts are tightly in place before use.

**WARNING**
Be aware of and avoid low overhead objects such as bridges, power lines, overhanging trees, etc.

**TO LOWER TOWER FOR STORAGE:**
Pull both Roll-Loc handles out and rotate forward 90 degrees and release. Using two people, lower the tower downward into the boat.

**CAUTION**
The tower must be supported when Roll-Locs are released, or the tower can fall into the boat injuring passengers or damaging the boat.

**TO RAISE TOWER:**
Lift the tower and rotate Roll-Loc handles toward the back to lock into place. This will secure the tower in the upright position.

**WARNING**
LOOSE FITTINGS MAY RESULT IN TOWER COLLAPSE.
CHECK TIGHTNESS OF TOWER BOLTS AND KNOBS BEFORE EACH USE.

---

**S-BEND TOWER**

**To Raise Tower**
- Lift tower and swing both handles to "Lock" position

**To Lower Tower**
- Support tower in place and swing locking handles to "Unlock" position. Slowly lower tower until it stops.

**WARNING**
Do not tow or operate boat with the tower in the lowered position.

**Fold Assist Option**
See your dealer to set when accessories are added to the tower.

**OPTIONAL BIMINI TOP STYLES**

**S Bend Tower with Z5 Cargo Rack**

**S Bend Tower with Bimini Top**

The bimini top is designed as a sunshade. Please see the mooring cover section for instructions on cleaning and caring for your bimini top. When opening and latching the straps to the eye hooks, twist the strap one to two times to prevent them from vibrating in the wind.

**CAUTION**
DO NOT tow the boat above 45 MPH with the bimini top open. Damage to the canvas may occur. This type of damage is not warrantable.
**Bow Light**

The bow light is located on the forward deck. To alert other boaters to your position and direction while underway at night, the light is green on the starboard side and red on the port side. To replace the bulb, remove Phillips screw to lift cover.

**Stern Pole Light**

The removable pole light is stored in the bow. Always check for proper alignment when inserting the pole light into the receptacle.

The pole light must always be in place and illuminated when visibility is limited. The pole light must be displayed while underway from sunset to sunrise. The pole light must also be illuminated while at anchor from sunset to sunrise.

**NOTE:** Boats that are equipped with factory installed towers do not have a stern light pole even though the rear light receptacle is installed. If you would like a rear 360 pole light so you may operate your boat after dark with the tower removed, you may purchase one through your dealer.

**CAUTION**

**DO NOT** pull skier with tow rope attached to ski pylon while pole light is in place.

**Tower Pole Light**

On boats equipped with factory installed towers, the 360° White Pole Light is mounted on the tower. To raise the light, pull the lever on the side of the light and then carefully raise the light to a vertical position. Always lower the light after use and before trailering to avoid hitting low overhangs.

**NOTE:** If using tower pole light, do not use stern pole light.

**Pop-Up Cleat**

To use the cleat, pull center up.

**WARNING**

**DO NOT** tow objects with the cleats.

**Pole Light Receptacle**

The pole light receptacle is located on the port side deck near the stern. To install the pole light, open the cover completely and with the plug correctly aligned, slide it into the socket until the electrical contacts are firmly in place.
**Bow Eye**

The bow eye is located at the front of the hull below the rub rail. It is the point of attachment to lead the boat onto the trailer and to secure the boat to the trailer or to a tie-off when docking.

**NOTE:** See Hoisting Instructions before using the bow eye to hoist the boat.

**WARNING**

DO NOT use the bow eye ONLY to hoist the boat. You must use a sling with the bow eye when hoisting the boat. Use only the designated lifting rings to hoist the boat. (See Hoisting Instructions.)

---

**Lifting Rings**

Two lifting rings are located on the transom.

**NOTE:** The lifting rings should be the only point of attachment for lifting cables. (See Hoisting Instructions.)

---

**Outback V Ski Platform Detachable Bracket**

The ski platform is fastened to the boat with detachable brackets. The platform may be removed from the boat by pulling the retaining pins from the brackets.

---

**Standard Detachable Bracket**

The ski platform is attached to the boat with detachable brackets. The platform may be removed from the boat by 1. Set platform on bracket. 2. Locate lower pin. 3. Locate locking pin through brackets. 4. Swing locking arm over end of pin.
**Standard Platform**

All Moomba models are equipped with a ski platform on the stern. The platform allows easy access to and from the water for skiers and swimmers. It is recommended that all entries to and exits from the water be made from the platform to avoid accidents. (The fiberglass deck can become slippery when wet.)

⚠️ **DANGER**

Shut Engine OFF when people are on the platform or in the water near the platform.

⚠️ **DANGER**

Exhaust fumes contain carbon monoxide. Direct or prolonged exposure to carbon monoxide will cause brain damage or death.

---

**Propeller**

The research and design team at Skier's Choice has carefully explored and tested many different propellers and pitch angles for use on Moomba boats. All tests indicate that the current propeller installed on your model is the best for the variety of boating performance required, whether skiing competitively or for pleasure.

It is strongly recommended that your Moomba dealer be notified before changing the propeller. In general, changing to a lower pitched propeller may increase acceleration, but will decrease top speed. Changing to a higher pitched propeller may achieve higher top speed with a light load, while acceleration and power may decrease.

---

**Propeller Precaution**

⚠️ **WARNING**

Moving propeller will cause injury. Propeller may rotate with boat in neutral. Shut off the engine when people are on the platform or in the water near the platform to avoid injury from the prop rotation.

**NOTE:** Under no circumstances should a propeller which allows the engine to surpass recommended RPMs be installed.

⚠️ **CAUTION**

Avoid engine damage, do not exceed the Max RPM as listed for your motor. Some props may allow the engine to over-rev which can cause non-warrantable engine damage.
**Optional Trim Switch and Gauge**

**Outback V**
This switch controls the optional wakeplate. The gauge indicates the position of the wakeplate.

**M-Series**
The optional wakeplate allows the driver to control the running attitude of the boat.

**Battery Box**

The battery box is mounted on the inside of the observer’s seat storage compartment.

**Note:** It is recommended that the battery cables be disconnected from the battery when the boat is placed in storage. (Refer to Battery Cable Installation and Precautions)

**Caution**
Avoid damage or injury from battery acid. Ensure that battery is properly secured before using the boat.

**Walk-Through Windshield**

The moveable center windshield panel allows access to and from the bow area on some models. To open, turn safety latches to vertical and push. Carefully lay the hinged windshield panel back against the fixed side panel.
The following conditions may be considered normal operation of the fuel gauge and fuel system:

- Gas station pumps may shut off before the fuel gauge indicates FULL.
- The amount of fuel required for fill-up may not exactly correspond to the gauge.
- The gauge needle may not move away from FULL until some time after fill-up.
- The gauge needle may move during turns, stops, and acceleration.

**NOTE:** Become familiar with engine hourly fuel consumption at various speeds and know when to check the fuel gauge.

---

**FUEL VENT**

The fuel cap is located on the rear deck, 2-4 feet from the stern. To open, push the black tab located on the bottom side of the gas cap. When the black tab is pushed, the gas cap will hinge upward. To close, push the gas cap down. When the gas cap is completely closed a “click” sound should be heard. The audible “click” ensures that the gas cap is closed and sealed.

The new fueling system prevents spillage from occurring. Air is allowed to escape from the front and rear of the gas tank. Both vents are on a central fuel line, which runs to a central holding container for the vapor. The vapor is released over time. This type of venting system allows for the tank to be filled without building any back pressure. Without back pressure, spillage should be completely eliminated from the fueling process.

This venting system doesn’t allow water to enter the fuel system. In the unlikely event that water runs up against the fuel vent, the fuel vent has a one-way valve. The one way valve allows for air to release, but denies water from entering. The gas cap itself is sealed with a rubber seal. When the gas cap is “clicked” closed the seal prevents any water from entering the system.

---

**DANGER**

Gasoline vapors are highly explosive!

---

**REAR SEAT STRAPS**

Ensure straps are snapped while underway or towing.

---

**COURTESY LIGHTS**

Courtesy lights are installed at several locations in the interior of the boat. The courtesy light switch is located on the instrument panel and is marked “COURT.”
Fuel Tank Pump

Your boat contains a fuel system that is designed using current fuel delivery technology. The common terminology for this type of system is: Pump in Tank.

The system consists of a dual high pressure pump canister that is mounted inside the fuel tank. On the top of the canister there is a fuel pressure regulator. The engine’s fuel lines are connected to the in tank fuel pump via a specially designed shielded, flexible high pressure fuel hose. This hose is pressurized. This system requires special tools and knowledge to service and maintain and as such is not owner serviceable.

The fuel filter for the boat’s fuel delivery system is in the fuel tank. This style filter system is considered a lifetime filter under normal circumstances.

The pump in tank fuel delivery system uses the fuel to lubricate and cool the fuel pumps. Running the pumps with very low fuel levels or running the pumps without fuel in the tank can induce air into the pumps which may shorten the fuel pump’s longevity. This type of fuel pump damage is not warrantable.

Optional Swivel Wakeboard Racks

Wakeboard racks are a convenient way to transport and store wakeboards while using your boat.

⚠️ CAUTION
Check tightness of all mounting hardware before each use.

⚠️ CAUTION
DO NOT trailer the boat with wakeboards mounted in the rack.

On all V-Drive models, the fuel pump is located beneath the floor in front of the rear seat. The pump may be accessed by twisting and removing the access cover.

The following USCG Information is Important to Your Safety and Safe Operation of the Boat:

“This boat complies with U.S. Coast Guard Safety Standards in effect on the date of certification with the exception of certain fuel system requirements associated with its fuel injected engine as authorized by U.S. Coast Guard Grant of Exemption (CGO 09-003). Maintenance of the fuel system in this boat should be performed only by experienced technicians using identical fuel system components.”

“Service of the engine installed in this boat requires special tools, training and genuine replacement parts which are only available from Skier’s Choice, Inc. The fuel system should be serviced only by a Skier’s Choice trained certified technician. Do not attempt to service the system yourself.”
**Optional Tonneau Cover**

The optional tonneau cover is designed to snap over the bow of the boat. Its purpose is to minimize air flow into the cockpit area when the boat is in use and as a storage cover when used in combination with the optional cockpit cover.

⚠️ **CAUTION**

DO NOT trailer the boat with the tonneau cover installed. The tonneau cover is not designed as a trailer cover and may come unsnapped or rip. This type of damage IS NOT covered by your boat warranty!

**Optional Cockpit Cover**

The optional cockpit cover is a snap down storage cover designed to help protect the interior of your boat. To install the cover, start at the windshield and work towards the transom. Be sure to install the cover poles to prevent water pocketing.

⚠️ **CAUTION**

DO NOT trailer the boat with the cockpit cover installed. The cockpit cover IS NOT designed as a trailer cover and may come unsnapped or rip. This type of damage IS NOT covered by your boat warranty!

**Optional Moomba Flow Surf**

Flow Surf, a new wake surf enhancement device that transforms wakeboarding wakes to fun versatility shaped surf waves without adjusting ballast thanks to straight forward operation and effective reliable design. Moomba's Flow Surf harnesses the flow of water at surf speeds.

With three stages of engagement, the Flow produces versatile wave shapes for a range of surfing skill levels and preferences. If you're looking to crank out fun versatile surf waves without ballast adjustment through "No Worries" operation.

When deployed to the first position, Flow Surf creates a steep surf wave with fast push even when evenly weighted. The Flow's second or middle setting mellows the ramp of the wave while increasing its mass and creating consistent momentum.

The third stage of Flow Surf takes the characteristics of the second adjustment level and lengthens the wave for surfing sets way off the back of the boat.

Move easily between these three wave shape variations by sliding the Flow Surf arm into the desired position on the port or starboard side.

Moomba offers an optional soft side cooler. The cooler conveniently stores under the lounge seat and can be used in or out of the boat.

Be sure to thoroughly dry your cooler after use to avoid mold and mildew.

**Optional Satellite Radio**

The optional satellite radio option is designed to give the user music access anywhere they go in North America. The system is a 100 channel system which is broken down into different music types such as: oldies, hard rock, easy listening, alternative, 80’s, jazz, big bands, etc. This system does have a minimal subscription fee that must be paid annually to continue service. Please see satellite radio owner’s manual for more information.

**NOTE:** Location of satellite antenna may vary.

**Digital Cruise Pro II**

**Parameters**
The following are the parameters that can be displayed in standard or metric units.

- RPMs/MPH
- Ballast / Wakeplate Settings
- Boat Speed
- Water Temperature
- User Settings
- Engine Hours
- Cruise On/Off
- Paddlewheel Offset
- Cruise Set Speed
- Active Fault Codes
- Stored Fault Codes

**Navigation and Keypad Functions**
The keys on the keypad are as follows:

**First Time Startup**
When power is applied to the 2015 Digital Cruise Pro II, the Warning and Shutdown lights illuminate and the Moomba logo displays.

Once the engine has started, the Main Page view appears with Water Temperature, Speed, ZeroOffTM Cruise status and Engine Hours.

While on this screen, press the Soft Key 1 and the top of the screen will read “Cruise On”. This will activate the down (Soft Key 2) and up (Soft Key 4) arrows to adjust the Cruise Set Speed.
The keys will produce the following when pressed:

<table>

</tbody>
</table>

Pressing the right arrow (Soft Key 5) will display the Ballast / Wakeplate page:

Pressing the right (Soft Key 5) arrow once more returns the display to the Main Page.

Menu Screens
Pressing the Menu button (Soft Key 3) will display the 2015 Digital Cruise Pro II’s menu:

Utilize the Soft Keys to:
- Go to the Home screen (Soft Key 1)
- Move the cursor down to the next selection (Soft Key 2)
- Enter the highlighted menu selection (Soft Key 3)
- Move the cursor up to the previous selection (Soft Key 4).

Engine Information
This screen displays the Oil Pressure, Voltage and Coolant Temperatures. The Engine Diagnostics link will display the following screen. Back (Main Menu) returns to the previous screen. Engine Diagnostics. The Engine Diagnostics screen will appear as follows:

Utilize the Soft Keys to:
- Display Active and Stored Faults (Soft Key 1)
- Display the previous fault (Soft Key 2)
- Return to the Menu page (Soft Key 3)
- Display the next fault (Soft Key 4), and/or
- Retrieve all faults (Soft Key 5). This key is only active when in Stored Faults.

User Settings
The User Settings screen will display as follows:
Adjusting the Brightness
Ensure Brightness is highlighted and press the Soft Key 3 until the desired Brightness of the screen appears. Once the status bar reaches the end, Soft Key 3 will make the bar start at the beginning and increment with repeated Soft Key 3 presses.

Adjusting the Contrast
Use the down arrow to highlight Contrast, and press the Soft Key 3 until the desired Contrast of the screen appears. Once the status bar reaches the end, Soft Key 3 will make the bar start at the beginning and increment with repeated Soft Key 3 presses.

Changing the Units
Use the down arrow to highlight Units, and press the Soft Key 3 to toggle between Metric and US Std.

Adjusting the Paddlewheel
Offset Use the down arrow to highlight Paddlewheel Offset, and press the Soft Key 3 quickly to increase the offset by 10ths. Holding in the Soft Key 3 will increase the offset by whole numbers. The Paddlewheel Offset range is -5.0 to 5.1.

Returning to the Main Menu
Use the down arrow to highlight Back (Main Menu) and press the Soft Key 3.

Ballast Settings
The Ballast Settings screen will appear as follows:
To adjust the Fill or Drain times, highlight Fill/Drain and press the Soft Key 3. The following screens will appear:

Adjusting the Ballast Time
Ensure the appropriate position is highlighted, and press the minus (Soft Key 1) or the plus (Soft Key 5) to adjust accordingly. To return to the Ballast Settings Menu, highlight the Back (Ballast Settings) selection and press the Soft Key 3. System Information The System Information screen will appear as follows: Pressing any Soft Key will return to the Menu page.

System Information
The System Information screen will appear as follows:

Night/Day
This setting simply turns off the backlighting for use in the daytime, and turns on the backlighting for use during nighttime.
Optional Tower Speakers

The optional tower speakers are an additional set of speakers designed to allow the rider to be able to hear the music. The tower speakers require the addition of an amplifier to power the speakers.

⚠️ CAUTION
Some lakes have noise restriction ordinances. The use of tower speakers may not be allowed in your area. Please check all applicable laws in your area regarding noise level restrictions.

Optional Subwoofer

The optional sub-woofer is designed to increase the sound level of the bass notes. The optional amplifier powers the sub-woofer. The bass level can be adjusted on the amplifier. Please see stereo amplifier owner's manual for more information.

Optional Transom Mount Stereo Remote

The optional transom mounted stereo remote allows the stereo to be controlled from the rear of the boat.

⚠️ DANGER
Keep away from rear of boat while the engine is running. Do not be on or about the swim platform while the engine is running or the boat is in motion.

Optional Stereo Amp

The stereo amplifier is an optional piece of stereo equipment that is designed to increase the wattage of the signal going to the speakers while minimizing distortion of this signal. Please see stereo amplifier owner’s manual for more information.

⚠️ CAUTION
Using a stereo amplifier without boat engine running may drain the battery to the point where the boat will not restart. This condition may happen very quickly, depending on the size of the battery!

⚠️ WARNING
It is illegal to wakeboard, ski, tube, etc., after sunset and before sunrise in most states. It has been outlawed because it is dangerous. Tower lights do not make these activities legal or safe.

Optional Walk-Through Curtain

Some Moomba models offer an optional Walk-Through Curtain that snaps into the front walk-through to help prevent cool air from flowing into the cockpit area.
The tower lights are designed to make docking, loading and unloading easier. The tower lights require the addition of a dual-battery electrical system.

NOTE: Tower lights are not to be used as running lights at night. USCG regulations mandate that a boat under power after sunset must display a 0 degree white light and a red/green bow light.
Optional Automatic Fire Suppression System

The optional Automatic Fire Suppression System has a sensor in the engine compartment that is designed to detect a fire. Under normal conditions, the dash area warning light will glow green when the ignition is “ON”. If the engine compartment sensor is activated by a fire, it will deploy the content of its fire extinguisher and the dash mounted warning light will turn red.

Optional Docking Lights

The optional docking lights are designed to help you dock, load and unload your boat in low light or at night.

NOTE: Docking lights are not to be used as running lights at night. USCG regulations mandate that a boat under power after sunset must display a 360 degree white light and a red/green bow light.

Optional Bow Filler Cushion

The optional bow filler cushion is a cushion designed to fit in the bow of the boat. It fits between the port and starboard bow cushions and makes the bow area a solid cushion.
The boat heater is a forced air heater that uses hot engine water as a heat source. To use the heater, simply turn the heater switch to the selected fan speed. In order for the heater to work, the engine must be at operating temperature. One of the features of the heater are the snorkel vents, which can be pulled out to direct heat to specific areas.

**NOTE:** Location may vary by model.

The optional engine water strainer is a filter for the engine cooling water. It is recommended for boats that are going to be operated in weedy conditions or other areas where debris could clog the engine. It consists of a stainless steel mesh filter inside a clear cup. It is located between the water intake on the bottom of the boat and the engine’s raw water pump. It should be checked periodically for debris as conditions dictate. To remove debris, unscrew the clear sight cup, remove the o-ring and stainless steel filter mesh and proceed to rinse out the cup. Be sure to reinstall the filter mesh and o-ring before reattaching the sight cup to the inlet.

**Optional Fresh Water Flush**

The optional Fresh Water Flush kit is a valve specifically designed to allow you to attach a garden hose to your engine water intake to flush brackish or salt water out of your engine. To use the Fresh Water Flush, simply attach a garden hose to the valve. Turn on the water to the valve. Start the engine. Monitor the exhaust ports on the transom of your boat and engine temperature gauge. Water should come out of the exhaust ports while the engine is running. It is recommended that you run the engine at a low RPM while flushing, since the engine’s raw water pump at higher RPMs can pump more water than the garden hose can supply. If you have questions on the operation of your Fresh Water Flush kit, consult your Moomba Dealer.
**Single Battery (Standard) Hookup**

The standard battery hookup is very similar to an automotive application. There is one red battery cable that connects to the positive (+) battery terminal and one black cable that connects to the negative (-) battery terminal. The positive cable from the battery goes to a power switch which allows you to turn power on or off to the dash components and engine. The stereo memory and bilge pump power will not be terminated by selecting the off position on the battery switch.

**CAUTION:** Do not turn the selector switch to the “Off” position when the motor is running. The alternator will be permanently damaged and is not covered under Skier’s Choice or Indmar warranty.

**NOTE:** It is recommended that you fully recharge your batteries using a battery charger periodically or after a period of high discharge (running many accessories for an extended period of time).

---

**Dual Battery (Option) Hookup**

The optional dual battery setup is designed to create a redundant system allowing the user to have a back up battery. The switch must be used in the “1” or “2” position to create the redundancy.

To properly hook up the two batteries:
1. Connect the grounding strap provided from the negative (-) post on Battery 1 to the negative (-) post on Battery 2.
2. Connect the negative (-) cable from the grounding buss bar to the negative (-) post on Battery 1.
3. Connect the negative (-) cable from the engine to the negative (-) post on Battery 1.
4. Connect the positive cable from the left side of the battery switch to the positive (+) post on Battery 1.
5. Connect the positive cable from the bottom of the switch to the positive (+) post Battery 2.

Battery 1 is designated as the primary battery and Battery 2 is designated as the secondary battery.

The battery selector switch has four positions; Off, 1, 2, 1&2.
- The “Off” position cuts all power to the boat except to the bilge pump and stereo memory.
- Position “1” only allows power to be drawn from or charged to Battery 1.
- Position “2” only allows power to be drawn from or charged to Battery 2.
- Position “1&2” allows power to be drawn from or charged to both batteries.

**CAUTION:** Do not turn the selector switch to the “Off” position when the motor is running. The alternator will be permanently damaged and is not covered under Skier’s Choice or Indmar warranty. It is highly recommended that Position “1” be used in most situations so the secondary battery will be available to start the engine from Battery 2 (secondary) if necessary.

Be aware that if position “1&2” is selected, both batteries will drain power at the same time and could leave you stranded due to weak batteries.

**NOTE:** It is recommended that you fully recharge your batteries using a battery charger periodically or after a period of high discharge (running many accessories for an extended period of time).

**NOTE:** Skier’s Choice highly recommends using quality “Dual Purpose” batteries.
The illustration above denotes the areas which may need to be accessed or may require cleaning or maintenance. It is important to have a basic understanding of the parts and their locations on the boat. However, it is recommended that any service beyond routine maintenance be performed by an authorized Moomba dealer.

**SERVICE & MAINTENANCE**

For your convenience a maintenance chart has been included in this manual. The chart indicates when to perform safety checks, lubrication, and general service to the boat. Engine hours or elapsed time determine when service is necessary.

It is recommended that any replacement parts used during maintenance or for repair be supplied by an authorized Moomba dealer.

**NOTE:** You are responsible for keeping records of all maintenance on your boat. To maintain your new boat warranty, you may be asked to show that required maintenance was performed.

</tbody>
</table>

* * If engine overheats, visually check. If clogged, remove debris.

*This inspection and maintenance schedule is recommended for average operating conditions in normal service. Under severe operating conditions or service, intervals should be shortened.*

**NOTE:**

REFER TO INDMAR ENGINE MANUAL FOR ENGINE, TRANSMISSION AND V-DRIVE MAINTENANCE SCHEDULE AND PROCEDURES.

---

**Body Lubrication**

Normal use of your Moomba causes metal to metal movement at some parts in the boat. The drive seat track should be lubricated with a water resistant chassis lubricant such as silicon grease.
Dripless Shaft Seal

Your Moomba comes standard with a dripless shaft seal. If any seepage occurs, contact your dealer.

Propeller Warning

WARNING

Moving propeller will cause injury. Propeller may rotate with boat in neutral. Shut off the engine when people are on the platform or in the water near the platform to avoid injury from the prop rotation.

V-Drive Location

The fluid level can be checked by using the oil level dipstick, which is located on top of the V-Drive transmission. This unit’s located under the center cushion of the rear seat. Pull out the cushion to access the transmission.
Battery Cable Installation & Precautions

Your battery is an important part of your boat. It provides all of the power to start your boat and also allows all of your electrical components to work, even if the motor is not running (bilge pump, blower, stereo, etc.).

Because of its important role, Moomba recommends using a good quality "Marine Dual Purpose" battery. The "Dual Purpose" rating means that it can provide the cranking Amps needed to start your motor and also has an Amp hour discharge rating so it can handle low electrical draw -down cycle.

Your Moomba electrical system is negative ground. The negative battery cable is grounded on the engine block. The positive battery cable is connected to the starter solenoid.

Connect the positive (+) battery cable to the positive (+) post on the battery. Connect the negative (-) battery cable to the negative (-) post on the battery.

⚠️ Caution ⚠️

Failure to connect battery cables as outlined will damage the system and void the warranty.

⚠️ Warning ⚠️

Hydrogen and oxygen gases are produced during normal battery operation and charging. Sparks or flames near the battery vent openings can cause the mixture to ignite and explode.

⚠️ Warning ⚠️

Sulfuric acid in the battery can cause serious burns. If spilled on skin or in the eyes, flush with clean water immediately, then seek medical attention.
Fiberglass Care

Washing and waxing the boat hull and deck regularly will extend the life and beauty of your Moomba. It is a good routine to rinse your boat with fresh water after each day’s use.

It is recommended that the hull and deck be cleaned and waxed after every 50 hours of use. This will decrease water friction and lessen the potential for staining or spotting on the gel coat surface.

When the original gel coat shine cannot be restored by waxing, the shine may be restored by hand buffing with a commercial polishing compound. Be sure to apply a new coat of wax containing Carnauba over the area that has been polished.

IMPORTANT: Porcelain cleaning powders are too abrasive for use on gel coat and may cause permanent discoloration if used. Household detergents containing ammonia or chlorine should not be used on gel coat. Never use acetone or ketone solvents to clean your boat finish.

Rub Rail Care

Use a sponge or other soft material to wash and wax the rub rail.

To wax, use a commercial automotive bumper wax.

NOTE: When tying up to a dock or another boat, always use cushioned fenders (dock bumpers) to protect your boat from hard surfaces.

Washing Your Moomba

The easiest way to preserve the beauty of your boat is to keep it clean by frequent washing. Wash the boat with lukewarm or cold water. Wipe the boat down immediately after washing to avoid water spots. Avoid using hot water or washing your boat in direct sunlight. Avoid using strong soaps or chemical detergents. To avoid spotting, all cleaning agents should be thoroughly rinsed from the surface promptly and not allowed to dry on the finish.

Windshield Care

Clean the windshield regularly to ensure that visibility is not obstructed.

Use a commercial glass cleaner to remove any spotting or stubborn stains that develop on the windshield.

Never use abrasive cleaners on glass or plastic surfaces as they may cause scratches.
Upholstery Cleaning

All upholstery items on your boat are made of tough marine grade vinyl that is easily cleaned with a mild detergent.

Strong detergents and cleaners may shorten the life of the vinyl. PLEASE SEE VINYL MANUFACTURER’S RECOMMENDED CARE GUIDE INCLUDED IN YOUR OWNER’S PACKAGE.

Foreign Deposits

Tree sap, bird droppings, airborne chemicals, petroleum products and other foreign matter may damage the gel coat surface if not removed promptly (See Washing Instructions).

Boat Hull Protection

If your Moomba is to remain in the water for an extended period, the hull below the water line should be painted with a marine bottom paint. Boats left in the water for extended periods of time without bottom paint may experience blistering or discolorization. This type of damage is not covered by your boat’s warranty.

⚠️ CAUTION

Damage caused by improper care, cleaning agents, conditioner oils, waxes, gasoline, etc., IS NOT covered under your boat’s warranty. Use only the recommended vinyl cleaner as listed on the Vinyl Care Instruction Sheet.

Please refer to www.spradlingvinyl.com for more information regarding vinyl care.

Drying Upholstery

It is important to provide for the drying of all upholstery and carpet after each use of the boat. Open all storage compartments and slide all removable cushions out about an inch to allow air to circulate behind.

Wet Slipping Boats

⚠️ CAUTION

- In the event of large storms, boats in wet slips are more likely to be damaged.
- If you do not use the boat often, the battery can go dead from pumping out water.
- The boat may develop organic growth which can greatly reduce performance, attack and discolor the gelcoat.*
- The boat may develop osmotic blisters.*
- The boat may get a stain line which cannot be removed.*

* Painting the area below the waterline of the boat with Pettit or Interlux products will reduce the likelihood of these last three.
Winterization

When the boating and ski season comes to a close, it is important to have your boat professionally winterized.

If your boat is exposed to temperatures below 32 degrees F (0 degrees C), it is possible for water in the engine, ballast system, heater core, etc., to freeze. As this water freezes, it expands and can crack pumps, valves, heat exchangers, engine blocks, etc. This type of damage usually requires the replacement of the cracked item and can be very expensive to repair.

⚠️ CAUTION

It is extremely important to follow the proper winterizing procedure. The engine must be correctly winterized for safe storage in your climate. This should be done by a professional. Your Moomba dealer will know exactly what must be done to ensure the longest possible life for your boat.

In addition to having your boat professionally winterized, the following tasks should be done to protect your boat during storage:

- Remove the center drain plug from the boat.
- Thoroughly clean the boat inside and out. Inspect the hull for any residue or algae growth and remove if required.
- Clean the bilge area thoroughly and operate the bilge pump to remove any water from the bilge hose.
- Remove all seat cushions and open all storage areas to allow air circulation in the boat interior.
- When thoroughly dry, replace cushions and close storage areas.
- Top off fuel tank to prevent any condensation from accumulating in the fuel system. Use a commercially available fuel stabilizer to remove water and prevent gumming.
- If the boat is stored on its trailer, ensure that the boat is properly positioned. If possible, lift the tongue so that the bow is slightly raised to promote drainage from the drain hole.
- Install the canvas cover and secure the straps in accordance with cover instructions.

NOTE: During the winter months, water is a boat’s worst enemy. Always store the boat when the interior is completely dry. Periodically check on the condition of the stored boat.

⚠️ CAUTION

Damage due to improper winterization IS NOT covered under your boat’s warranty.

⚠️ CAUTION

E-10 fuels require fuel stabilizers that are specifically designed for E-10 fuels to help prevent moisture absorption, phase separation and gasoline stabilization.

Summerization

Before using the boat after it has been in dry storage requires some special treatment. Moomba recommends having your boat professionally summerized, preferably by the same facility that prepped it for storage. They will be familiar with what items were done in the fall and what items need to be addressed in the spring.

In addition to having your boat professionally summerized, the following list of tasks should be done to ensure a successful start to your boating season.

- Check Trailer
- Tire Pressure
- Bearing Lube
- Brake Fluid
- Lights

- Check Battery
- Clean & Wax Gel Coat
- Clean Interior

- Check All Systems
- Blower
- Bilge Pump
- Navigation Lights
- Interior Lights

When launching the boat for the first time of the season, carefully watch all gauges to ensure that the boat is not overheating. the alternator is charging and the engine has proper oil pressure.
Hoisting

Correct Hoisting

If the boat ever needs to be hoisted, special attention should be given to the following recommendations:

- Hoist the boat using a horizontal lifting bar only.
- Never attempt to lift the boat by means of a cable sling from bow to stern lifting eyes.
- Hoist operator should slowly and smoothly lift the boat without jerking to avoid damage to the lifting eyes.
- Use a clevis inserted through the lifting eye since a hook may damage the lifting eye edges.

Incorrect Hoisting

⚠️ WARNING

Use only a proper sized sling in the designated lifting rings to hoist the boat.

NOTE: For boat houses or other applications where the boat will be lifted and held in that position, Moomba recommends using a cradle. The bunk configuration should mimic the trailer.

⚠️ WARNING

DO NOT use the ski pylon to hoist the boat. Incorrect hoisting may invalidate the warranty on the boat.
IDENTIFICATION NUMBER

The hull identification number is located on the upper right hand side of the transom below the rub rail.

**Fuse Panel - Under Dash**

**Fuse Panel - Battery Connection**

**Fuse Panel - Top of Engine**

### Main Dash Power-Circuit Breaker

The power to the dash circuit is protected by a circuit breaker that is located in the observer seat storage area near the battery.

To turn off the power to the dash, manually press the red button and the circuit breaker reset lever will flip down and the power to the dash circuit will be shut off. To reset the breaker, push the reset lever back up.

If all of the dash switches fail to work, reset the main dash power-circuit breaker.
TRAILER & TOWING

The trailer supplied with your Moomba model was designed especially for the boat with your convenience in mind. Please be sure that you have an appropriate tow vehicle before attempting to trailer your boat. Your vehicle must be capable of towing 3,500 — 6,000 lbs., depending on the model.

⚠️ CAUTION
Read the trailer towing section of your vehicle owner’s manual before towing your trailer.

All Moomba trailers require a 2” ball and a five (5) pin marine grade trailer wiring connector. The standard height from the ground to the top of the hitch ball should be about 20 inches. With the trailer attached to the tow vehicle, the trailer should stand level.

**Trailer Plug Wire Schematic**

<table>
<thead>
<tr>
<th>Color</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>White</td>
<td>Ground</td>
</tr>
<tr>

<td>Right Turn/Brake</td>
</tr>
<tr>
<td>Yellow</td>
<td>Left Turn/Brake</td>
</tr>
<tr>
<td>Brown</td>
<td>Running Lights</td>
</tr>
<tr>
<td>Blue</td>
<td>Reverse Lights</td>
</tr>
</tbody>
</table>

**NOTE:** Moomba trailers feature disk brakes. The fifth wire (blue) on the wire connector needs to be connected to your vehicle’s reverse lights to be operative. This wire (blue) provides power to a solenoid which deactivates the brakes while in reverse. You may still tow your trailer without the blue wire connected, however, you may experience difficulty backing the trailer.

**WARNING**

**BEFORE USE, READ ALL INFORMATION SUPPLIED WITH THE TRAILER BY THE MANUFACTURER.**

**The following guidelines will prolong the life of the boat and trailer:**

1. Always secure the boat to the trailer with tie-downs. Do not place straps around fenders or lights.
2. Always verify that the winch hook is securely in the bow eye, the strap is tight and the winch handle locked in place before trailering.
3. Check the recommended pressure displayed on the side of the tires and assure that it is maintained.
4. Under-inflated tires could cause trailer sway and excessive tire wear.
5. Verify that the trailer hitch on the tow vehicle is the proper class and size to support the tongue weight and the trailer load.
6. Check wheel bearing lube.
**UNLOADING PROCEDURE**

NOTE: DO NOT attempt to use excessive power to free the boat from dry carpet runners. Power off of the trailer only when the boat has floated free.

⚠️ CAUTION
If the trailer is not submerged to the correct depth, the bow of the boat could drop when powering off incorrectly, possibly damaging the boat.

NOTE: Before operating your Moomba, refer to the Daily Check List and the Boatman’s Check List.

To unload the boat use the following procedure as a guide:

1. Make sure that all drain plugs are securely in place.
2. Unplug light cord before backing into the water.
3. With Bow Eye Hook fastened, back the trailer until the water level is approximately one inch below the top of the trailer fenders.

NOTE: Ramp slopes vary, so actual level of water on trailer may be different.

⚠️ CAUTION
Make sure that the engine water intake is fully submerged.

4. Follow the cold start procedure recommended in this manual.
5. After starting engine, unlatch Bow Eye Hook to ensure the boat will release from the trailer.
6. With engine idling, center the steering wheel, engage the transmission into reverse (pull back on lever,) then ease back on the throttle.

NOTE: Because your Moomba is a direct drive inboard, when backing the stern will have a tendency to drift left or right depending on propeller rotation. This condition will self-correct as the rudder reaches control speed.

**LOADING PROCEDURE**

To re-trailer the boat, position the trailer in the water with approximately 1 inch of the top of the fender showing as in step 3. UNLOADING.

Idle/coast the boat onto the trailer using as little power as possible keeping it centered between the guide poles.

NOTE: DO NOT Power onto the trailer during rough conditions.

When correctly positioned on the trailer turn off ignition. Use the Hook and Trailer Winch to pull the boat up to the Roller Stop.

⚠️ CAUTION
The trailer must be positioned for the correct water depth for loading or you may damage the boat. Varying ramp angles require different procedures. In general, the steeper the ramp, the more shallow the trailer should be positioned in the water. Your local dealer can help you understand this, should you require additional assistance.
When pulling the boat onto the trailer, be sure that it is centered on the trailer.

The distance between the boat and the wheel runner board should be about equal on both sides.
TRAILER BASICS
See Trailer Owner’s Manual for additional product information, safety information and warnings.

TANDEM AXLE

Some models come standard with a tandem axle trailer and with some it is an option.

SECOND AXLE DISC BRAKES

The standard second axle disk brakes give the trailer more stopping power.

LED PACKAGE

The standard LED lighting package replaces the traditional trailer lights with LED lights. The LED lights are brighter than the traditional lights.

NOTE: Vehicles with trailer light monitors may not function properly with LED lights due to the low resistance of the LED lights. Aftermarket resistor packages are available which allow the monitors to work properly.

SWING-AWAY TONGUE

With the swing tongue, you can shorten the trailer length for storage by pulling the pin and swinging the tongue away to the side.

WARNING

DO NOT tow trailer without latch pin installed.

CAUTION

Always install safety clip on end of latch pin.

SURGE BRAKES FLUID RESERVOIR

To check brake fluid, twist black cap and remove. Pry rubber plug out of reservoir. Follow instructions printed on plug. Use DOT 3 Brake Fluid.

VAULT BEARINGS

Your trailer features Vault bearings. See trailer owner’s manual for more information.
**Optional Aluminum Step Plate**

The optional aluminum step plate gives the trailer a durable long-lasting, nonskid surface on the trailer steps.

---

**Optional Laser Cut Steps**

The optional laser cut steps are backlit so they illuminate when the trailer’s running lights are illuminated.

---

**Optional Spare Tire Bracket**

The optional spare tire bracket allows you to conveniently carry a spare tire.

---

**Optional Aluminum Wheels**

The optional aluminum wheels are a trailer grade wheel. They are a great way to dress up your trailer.

---

**Optional 18” Aluminum Wheels**

The optional 18” aluminum wheels are a trailer grade wheel. They are a great way to dress up your trailer.

---

**Optional Heavy Duty Trailer Jack**

The optional heavy duty trailer jack is a great way to dress up your trailer.
**Moomba Limited Warranty**

Taking care of our product after it becomes yours has always been “standard policy” at Skier’s Choice, Inc., the proud manufacturer of the Moomba line of boats. And to further prove our point, we offer the following limited warranty.

**Terms of Warranty**

During the applicable Warranty Period (as defined below), Skier’s Choice, Inc. (“Skier’s Choice” or the “Company”) warrants to the original retail purchaser (the “First Owner”) that the components and parts manufactured by Skier’s Choice (the “Covered Components”) of each new Skier’s Choice boat are free from any defects in material and workmanship, under normal use and when operated and maintained according to boat’s instructions (“Normal Use and Operation”).

- This Limited Warranty applies to all Covered Components other than the deck, hull, floor and stringers for a period of one year (the “One-Year Warranty Period”) from the original date of purchase by the First Owner (the “Original Purchase Date”). Exclusions do apply.
- Skier’s Choice will supply replacement parts for Covered components during the second year of ownership from the original date of purchase by the First Owner (the “Original Purchase Date”). Labor to replace covered components will be the responsibility of the owner during the second year of ownership.
- This Limited Warranty applies to the deck, hull, floor (excluding carpet) and stringers for the lifetime of the boat (the “Lifetime Warranty Period”). Exclusions do apply.
- This Limited Warranty applies to the gel coat for a period of one year (The “One-Year Warranty Period”) from the original date of purchase by the First Owner (The “Original Purchase Date”). Exclusions do apply.

This Moomba Limited Warranty may be transferred to a second owner for a period of five (5) years from the original date of purchase. The remaining duration of the Moomba limited warranty from the first owner’s original purchase date is transferable. A nominal warranty transfer fee and a dealer inspection are required. Boats that are damaged or have been abused may not be eligible for the warranty transfer. Inspection and fees need to be completed within 14 days of the sale to a subsequent owner or the boat will not be eligible for the warranty to transfer.

Subject to the terms of this Limited Warranty, Skier’s Choice will repair or replace, at its sole option, any Covered Component which is returned during the applicable Warranty Period to the Skier’s Choice factory or to any other Moomba authorized repair facility (an “Authorized Moomba Facility”), provided that:

- Only the Covered Components that are declared defective upon examination by Skier’s Choice will be repaired or replaced under this Limited Warranty;
- Transportation of the boat, parts or components to and from the Skier’s Choice factory or the Authorized Moomba Facility must be prepaid by the owner;
- Notice of any claim under this Limited Warranty must be provided to Skier’s Choice by the Authorized Moomba Facility no later than sixty (60) days after the owner becomes aware of the defect.
- The boat was purchased at a dealership authorized by Skier’s Choice, Inc. to distribute the product in the country in which the sale occurred.

Notification of a claim or defect must be properly made directly to an Authorized Moomba Facility, who subsequently must submit the claim information to Skier’s Choice, Inc. at 1717 Henry G. Lane Street, Maryville, Tennessee 37801. Information needed for processing a claim includes: (1) Name and address of the owner; (2) Serial number of the boat; (3) Original retail purchase date; (4) Detailed explanation of the defect; and (5) Estimated repair cost.

**Note:** Warranty repair or replacement cannot be made until this information is approved by Skier’s Choice.

In case of defect of a Covered Component, Skier’s Choice will use its reasonable best efforts to repair or replace the Covered Component within ninety (90) days of receipt thereof at its factory or an Authorized Moomba Facility. Any warranty on replaced or repaired components pursuant to this Limited Warranty shall remain in effect only for the remainder of the original Warranty Period. The repair or replacement of Covered Components will be made by Skier’s Choice without charge to the owner for parts or labor. The replacement or repair of the defective part or component as stated in this Limited Warranty shall be the sole remedy of the owner and the sole liability of the Company under this Warranty and any implied warranties.

There are no express or implied warranties on the parts and components manufactured or sold by Skier’s Choice except as set forth in this Limited Warranty.

**Exclusions**

Claims or assertions relating to the following are specifically excluded from coverage under this Limited Warranty and Skier’s Choice disclaims any liability or obligation with respect to the following:

1. Defects in or damage caused by or relating to the engine or any part thereof. (Note: The engine may be covered by warranty of the engine manufacturer. Please see engine manufacturer warranty for details.)
2. Defects in or damage caused by or relating to the trailer or any part thereof. (Note: The trailer may be covered by warranty of the trailer manufacturer. Please see trailer manufacturer warranty for details.)
3. Covered Components of a boat that has been sold by the First Owner and the warranty transfer was not completed.
4. Damage caused by, related to, or resulting from failure of components or parts which are not manufactured by Skier’s Choice, including but not limited to bilge pump failure.
5. The Limited Lifetime Warranty on the deck, hull, floor (excluding carpet) and stringers does not include hardware
or other components fastened or adhered to the hull, deck, floor or stringers.

6. Normal maintenance and upkeep relating to the boat or any part thereof, including but not limited to, alignment, adjustments, connectors, tune-ups and wear items, such as, shaft packing, belts, hoses, filters, seals, gaskets, strut bushing, etc.

7. Damage to or malfunction of a boat, or any component thereof, resulting from owner use, lack of maintenance, improper maintenance, impact, misuse, negligence, collision, delay in repair, improper hoisting or cradling of the boat.

8. Any and all consequential damages including, but not limited to, costs incurred for haul-out, launching, towing and storage charges, telephone or rental charges of any type, inconveniences, loss of use, or loss of time or income.

9. Equipment installed by anyone other than authorized factory personnel at the Company’s production facility. Equipment replaced at an Authorized Moomba Facility pursuant to this warranty agreement remains under warranty until the expiration of the Limited Warranty period.

10. Any boat which is: (a) used for rental or other commercial, military or industrial purposes; (b) used in boat racing, demonstrations, ski school, or similar events; (c) altered, modified, repaired or replaced so as to increase the cubic inch capacity or horsepower output of the engine and boat as originally manufactured; (d) not properly stored or maintained.

11. Any boat which is: (a) repossessed from a retail customer; (b) purchased at auction (bank auction, online auction, auction house, etc.); (c) purchased from a salvage yard; (d) purchased from an insurance company that obtained the product as a result of an insurance claim.

12. Speeds, fuel consumption and other performance characteristics because they are estimated and may vary.

13. Damage to or defects in paints, varnishes, gelcoat surfaces and colors, finish distortions, chrome plated or anodized finishes, floor covers and any other surface coatings.

14. Gelcoat discoloration, blisters or bubbles, including, but not limited, to those which may result from a boat being left in the water for long periods of time.

15. Upholstery cracks, mildew, stains or tears resulting from owner use, lack of maintenance, improper maintenance, impact, misuse, negligence, delay in repair, use of improper cleaners or conditioners.

16. Gelcoat limited warranty is not transferable to second owner and its duration is limited to one (1) year from the original purchase date.

17. Any boat purchased from a dealer in another country, where the primary use of the boat will require the boat to cross an international border, except to the extent otherwise expressly provided in a separate written agreement between the First Owner and Skier’s Choice.

18. Skier’s Choice reserves the right to improve its products through changes in design or material without being obligated to incorporate such changes in products of prior manufacture.
**Owner’s Responsibility**

1. Before operating your Moomba, it is necessary to read and fully understand this Owner’s Manual and all other information delivered with the boat.
2. It is the owner’s responsibility to take the boat to an authorized Moomba dealer to obtain warranty service.
3. It is the owner’s responsibility to properly operate and maintain the boat in accordance with this manual and all other information delivered with the boat.
4. The owner should keep maintenance records should it be necessary to show that required maintenance has been performed on the boat.

**Dealer’s Responsibility**

1. The Dealer should provide the buyer with an adequate orientation in the general operation of the boat and review all systems and accessories included with the boat.
2. The Dealer should deliver a complete owner’s manual packet with the boat consisting of Owner’s Manual, Registration, Engine Manual, Stereo Manual, Moomba Warranty and all warranties for separately warranted items aboard the boat.
3. The Dealer should review all warranty information with the buyer and assist in filling out warranty cards if necessary.
4. The Dealer should ensure that any information or obligation from either Skier’s Choice, Inc. or from the dealership is clearly understood by the buyer.
5. The Dealer should instruct the buyer in obtaining local service and out-of-area service for a Moomba boat.

**Customer Assistance**

The staff at Skier’s Choice, Inc. is concerned with your complete satisfaction. This includes the prompt resolution of any problems that may arise during the warranty period. Normally, problems encountered may be efficiently and effectively resolved by your Moomba Dealer. However, if a problem cannot be handled by the Dealer or if a solution is not satisfactory to you as an Owner, please follow these steps to get the matter resolved:

**Step One**
Discuss the problem with a member of your Moomba Dealer’s management staff. It is most likely that the problem will be resolved at this level.

**Step Two**
If the Dealer management does not resolve the problem to your satisfaction, please have the problem and all action taken, documented by the Dealer, then contact the factory Customer Service Representative at Skier’s Choice, Inc.

**Skier’s Choice, Inc.**
1717 Henry G. Lane Street
Maryville, TN 37801
Tel: (865) 983-9924
Fax: (865) 983-9950

Describe the original problem in detail to the Customer Service Representative. Be prepared to furnish appropriate documentation and the reasons why service by the Dealer was unsatisfactory. If further action is required to resolve the problem, the Customer Service Representative will dictate the appropriate action.

**Step Three**
Finally, if after following these steps and providing documentation and after obtaining necessary authorization from the Customer Service Representative to take additional action, the problem is still not resolved to your satisfaction, the President of Skier’s Choice, Inc. will personally review the problem and make a determination concerning final resolution.

Watersports Safety Code

Before you get in the water: Skiing or riding instruction is recommended before use. Instruction will teach general safety guidelines and proper skiing or riding techniques, which may reduce your risk of injury. For more information on skiing or riding schools, contact your dealer, Association, or local ski club.

- Know the federal, state and local laws that apply to your area.
- If you are not familiar with a waterway, ask someone who is, to tell you about any hidden dangers or things to avoid.
- Whether you plan to be in a watercraft, or skiing/riding behind one it is important you are wearing a properly fitted life jacket (PFD) approved by your country's agency, USCG Type III, ISO, etc.
- Inspect all equipment prior to each use, check bindings, fins, tube, attachment, tow rope and flotation device. Do not use if damaged.

Watercraft Safety: A knowledgeable and responsible driver is the most important safety device on any watercraft.

- Never operate a watercraft, ski or ride under the influence of alcohol or drugs.
- Only use water ballast and people for additional weight.
- Never exceed the passenger or weight limitations of the watercraft.
- Never allow passengers to hang outside the watercraft or towed device or sit on the gunwales or anywhere outside of the normal seating area.
- Never allow water to overflow the bow or gunwales of the watercraft.
- Uneven weight distribution or additional weight may; affect the handling of the watercraft.

Carbon Monoxide: The exhaust from the engine on a watercraft contains Carbon Monoxide (CO) which is a colorless, odorless and poisonous gas. Excessive exposure to CO can cause severe injury or death. Follow this advice to avoid injury:

- Never “Platform Drag” by holding onto the boarding platform or be dragged directly behind the watercraft. This is where CO will be.
- Do not sit on the watercraft transom or boarding platform while the engine is running.
- Make sure the engine is properly tuned and running well. An improperly tuned engine produces excessive exhaust and CO.
- If you smell engine exhaust, do not stay in that position.
- Go to the United States Coast Guard’s website: www.uscgboating.org for more information on how to help protect yourself and others from the dangers of CO.

Tow Ropes: Tow ropes come in different lengths and strengths for different activities. Make sure any rope you are using is suited for skiing or riding and that it is in good condition.

- Never use a rope that is frayed, knotted, unraveling or discolored from use or being left in the sun. If a rope breaks while in use, it can recoil at the skier/rider being towed or into the watercraft where it might strike passengers. Replace tow ropes with any sign of damage.
- Never use a tow rope with elastic or bungee material to pull skiers or riders.
- Rope should be attached to the watercraft in an approved fashion with hardware designed for towing. Refer to you watercraft manual for instructions on proper tow rope attachment.
- Always keep people and tow ropes away from the propeller, even when idling.
- If a tow rope should become entangled in a propeller, shut off the engine, remove the key and put it in your pocket before retrieving the rope.

Preparing to ski or ride: Always have a person other than the driver as an observer to look out for the skier/rider.

- BE sure the driver is aware of the experience and ability level of the skier/rider.
- The driver, observer and skier/rider need to agree on hand signals before skiing or riding. Signals should include READY, STOP, SPEED UP, and SLOW DOWN.
- Start the engine only after making sure that no one in the water is near the propeller.

Turn the engine off when people are getting into or out of the watercraft, or in the water near the watercraft.

- Always make sure the tow rope is not wrapped around anyone’s hands, arms, legs, or other parts of the body.
- Start the watercraft and move slowly to remove slack until the tow rope is tight.
- When the skier/rider signals READY and there is no traffic ahead, take off in a straight line. Adjust the speed according to the signals given by the skier/rider.
**Skiing or Riding:** The watercraft and skier/rider should always maintain a sufficient distance from obstacles so a skier/rider falling or coasting and/or watercraft will not encounter any obstacle.

- Do not use in shallow water or near shore, docks, pilings, swimmers, other watercraft, or any other obstacles.
- Use only on the water.
- Never attempt land or dock starts. This will increase your risk of injury or death.
- Always wear a properly fitted U.S. Coast Guard Type III (PFD) or ISO approved Life Jacket.
- The faster you ski or ride, the greater your risk of injury.
- Never make sharp turns that may cause a slingshot effect on the skier/rider’s speed.
- Skier/Rider should be towed at an appropriate speed for their ability level.

**Fallen skier or rider:** Falling and injuries are common in skiing or riding.

- Circle a fallen skier/rider slowly to return the tow rope handle or pick up the fallen skier/rider.
- Put the watercraft in neutral when near a fallen skier/rider.
- Always keep the fallen skier/rider in view and on the driver’s side of the watercraft.
- Display a red or orange skier-down flag to alert other vessels that a skier/rider is down.

*The Warnings and practices in the Watersports Safety Code represent common risks encountered by users. The code does not cover all instances of risk or danger. Please use common sense and good judgement.*

**Watersports Responsibility Code**

Be aware that there are elements of risk in boating, skiing, and riding that common sense and personal awareness can help reduce. Know your ability level and stay within it.

To increase your enjoyment of the sport follow the “Watersports Responsibility Code”.

It is your responsibility to:

- Familiarize yourself with all applicable laws, the risks inherent in the sport, and the proper use of equipment.
- Know the waterways where you will be skiing or riding. Do not ski or ride in shallow water, near shore, docks, pilings, swimmers, or other watercraft.
- Always have a person other than the boat driver as an observer and agree on hand signals before starting.
- Always wear a U.S. Coast Guard type III (PFD) vest.
- Read your owner’s manual and inspect your equipment prior to use.
- Ski or ride within your limits. Always ski or ride in control and at speeds appropriate for you ability.
- Always turn ignition off when anyone is near watercraft power drive unit.
- Carbon Monoxide (CO) poisoning from engine exhaust may cause injury or death. Never “Platform Drag” or touch a swim platform while the engine is running.
- Do not operate watercraft, ski or ride under the influence of alcohol or drugs.
- Water Sports Industry Association
Moomba inboard ski boats are manufactured by Skier's Choice, Inc. in Maryville, Tennessee and distributed throughout the United States and the world.

Skier's Choice, Inc. reserves the right to change product specifications at any time without incurring obligation.

Be sure to read and understand all aspects of Boating Safety and Operation before using your boat. If you have any questions, your dealer can provide the information you need to have a safe and pleasurable boating experience.
